for Excellent Experiences

UX

DESIGN
AWARDS

2024

An Award by **IDZ** International
Design Center Berlin

Celebrating Excellence in Experience Design

The UX Design Awards align with the International Design Center Berlin's mission of over fifty years – promoting accomplished design and recognizing the people involved.

The steady growth of the awards over the past nine years continued in 2024 with a record number of more than 950 participants from over 50 countries. Our juries nominated 287 projects to enter the competition.

This year, the judges bestowed two Gold Awards and 26 Awards across all three competition categories. In addition, more than 40.000 users and professionals worldwide elected two Public Choice Award winners in two extensive online polls.

This publication presents all honored projects. As such, it showcases the best in user experience design from around the world. The awarded projects address real-world challenges and needs and consider indirect consequences and broader impacts. They streamline processes, integrate seamlessly into users' workflows and increase accessibility and user satisfaction. They also reveal how cutting-edge developments can be leveraged to elevate the user experience in a rapidly evolving technology landscape.

We are honored to recognize the hard work and dedication of the designers, teams, and organizations behind these projects. Their work is an inspiration to us all. The UX Design Awards celebrate the power of design to improve people's lives. We are committed to promoting excellence in user experience design and are proud to be a part of this ever-growing community.

Congratulations to all the winners and nominees of the UX Design Awards 2024!

Prof. Karsten Henze
Chair of the Board at the International Design Center Berlin

Prof. Pelin Celik
Vice Chair of the Board at the International Design Center Berlin

Ake Rudolf
Head of Strategy at the International Design Center Berlin
and Director of the UX Design Awards

Interview

A conversation between Ake Rudolf and Joon-Mo Lee, chair of the jury for the UX Design Awards – Autumn 2024

Joon, can you tell us a bit about your work and background?

After ten years working with brandies, marketers and creatives in the toy and fast-moving consumer goods (FMCG) industry, I burnt my savings and did a Master in Innovation Management at Central Saint Martins. These two years in London defined me as a creative business leader in the 10 years that followed.

Since 2014 I have led creative teams at the intersection of culture, design and strategy. First with TEAGUE and then with PHOENIX as Managing Director. Beginning of June I was seen off by PHOENIX with cannon salute and lots of booze, and am now exploring myself for the next adventure.

What inspires you in your daily job?

I am fascinated by things and culture and brands. Design brings all of it together. It helps people make sense of the world and live with dignity. Insights-work and the refreshing ingenuity of designers give me hope that a new, empowered breed of creatives will, ultimately, be able to reshape the business world and a society that is increasingly messed up and confusing.

You've chaired the awards jury twice. How did you experience judging the competition?

I am delighted with the UX Design Awards culture. I love the honest and personable exchange with so many exceptional professionals, who are not only smart and successful, but also nice and relatable. Real greatness means being genuine, not aloof.

It's good and important that the IDZ is a truly impartial institution that encourages speaking the truth for design and honours great work regardless of business popularity. Being heard as a juror is both a privilege and a responsibility to remind designers of their duty to combat mediocrity.

Was there anything that caught your eye among the competition entries this year?

Did you observe any trends or developments?

I felt reassured that young talents (and academia) in particular continue to agree that design and innovation must always be good for people first. Doing good is the only sustainable way to commercial success.

One entry I liked a lot introduced the idea to turn existing networks of mail carriers to alleviate loneliness that elderly people experience. Even though the idea itself isn't entirely new, I would like to see more creativity dealing with important topics as such.

Innovation should command value by solving difficult challenges of the modern human condition, and not only by feeding a machine that happens to be fashionable or lucrative.

Having said that, it is still important to make money and I would wish for designers to spend more time on designing creative and fair ways for how to make money. The commercial exploration of creativity should be more pronounced in design education.

What information is most important to you when evaluating submissions? What is the key to bringing an idea across?

When evaluating, the principles of a good, assertive elevator pitch apply, and these haven't changed much. With brevity, an entry must explain a problematic cultural or professional context, the involved actors and provide an original perspective on it. Such critique should be followed by explicitly identifying an intriguing problem (insight) that is followed by a deft, structured description of how the presented innovation addresses the challenge and will make money.

Additionally, I would like to see commentary on the ups and downs during the design process with a focus on creative approaches.

Nothing wrong with the double diamond (I love it, really.). But the concrete decisions made in the design of the project are definitely more exciting than the theory.

Generally, being explicit (and not generic) is important. Instead of saying that “the insights led to the results”, I actually want to know what the core insight was.

Looking back at the growing number of products and concepts that employ generative AI and LLMs (large language models), what are inspiring application scenarios? Where do you still see weaknesses or potential pitfalls?

The most amazing thing about generative AI is that people can explore knowledge in a more humane way. Expert knowledge often comes with expert code that is very specific, but excludes lay-people. Any application – from simplifying legal text to offering interpretation of statistical data sets, or understanding what quantum theory – is quite neat and can empower people.

My greatest critique of the AI hype is that we don’t talk much about GenAI’s inability to develop truly original thought, the lack of sixth sense, or the value of self-reflection that our “slow, human way” is all about.

Life is not just about fast output with results that are good enough. It’s also about passion, perfection and depth, things that you only attain through the experience of craft, reflection and repetition however arduous. It’s similar to travelling or reading a book. It’s not about the destination or the pure information, but about the journey and the experience of structure, sounds and imagery.

How is the role of design, especially UX design, changing with AI? What specific design skills are becoming increasingly important in this rapidly developing field?

We must all continue to sharpen our language skills. It’s always been important, but now mastery of expression and large vocabulary has a direct impact on the quality of whatever GenAI chooses to produce, at least as long as verbal input is our prime device to work with GenAI technology. Critical thinking skills and common human sense also continue to be at the heart of design, and are crucial in evaluating results produced by AI.

You have worked in management roles and completed an MA in Innovation Management. What do you bring to the design industry due to this background? Which skills from the management field can be especially helpful for designers?

Innovation is what everyone talks about, but what very few understand. My studies helped me understand the connections and frictions between culture, creativity and strategy in the pursuit of innovation.

This understanding is useful in interpreting cultural phenomena in research and identifying insights, but also to create cultures of innovation in organisations and broadening our understanding of what the role of design is.

In addition to understanding non-design business contexts, and how non-design

business leaders think, designers must embrace project design and management skills, learn how to sell and argue, and learn how to navigate organisations politically.

You believe that designers have an influence on companies and customers. This role also entails a great deal of responsibility. What does responsible design mean to you, and how do you meet this challenge in your work?

Responsible design means creating things and experiences that support a rich and fulfilling life in all its facets.

That’s why design projects in my past always started with evaluating whether the intention of a brand or product serves humanity, and why I insist on thorough research and insights. I have turned down lucrative engagements in the past because they might have had an awesome brand and products, but their products were ultimately harmful.

We must all acknowledge though that doing right by people is not always easy, and often a matter of political perspectives or degrees of severity. The goal of innovation in commercial business is value creation, and often not a simple matter of black and white, good and bad.

Designers are not artists, we’re all part of an economic system that is both beautiful and ugly at the same time. Just like our personal lifestyles contain things that we are not entirely proud of, so does business reality.

What’s still missing for you when it comes to the focus of UX design?

UX is not just about visual design, feature functions or hardware, but how these things are blended into a mix that makes life better and also more enjoyable. But often still, we encounter designed experiences that adhere to unwritten industry rules, simply not to confuse anyone.

We don’t need to change things that work great, but if something is really not great, we should not hesitate to improve it. How many years have we accepted mobile browsers with search bars on top? Too many.

Understanding and accepting reality is sometimes hard. But just because we have always done things in a certain way, we’re not always right with our own assumptions and it’s worth your time to challenge the status quo.

Finally, what advice would you offer future UX Design Awards participants?

Own your critical thinking and writing skills, always know the market and cultural trends, focus on real insights and learn how to pitch your work with verve and brevity. Be concrete.

Dear Joon, thank you for your insights and a great conversation!

Jury Members

The jury is the core of the UX Design Awards. The independent experts' many years of experience guarantee the highest quality of the competition. On the following pages we proudly present the jury members of both Award seasons in 2024.

Gennett Aku Agbenu

Global Head of Brand Experience/
Creative Direction, Siemens AG, Spring Jury Chair

Expert in Brand and Design Strategy

Gennett is head of brand experience globally at Siemens. Passionate about helping brands to “do different” to make a difference and shape a positive future today. In her career, she has worked with various brands in the automotive, travel, banking, healthcare, energy, and home appliances sector.

Gennett holds a Diploma and MA in Communication Design and an MBA in Business Administration. She is a lover of creativity, humor, and excellence. And so far, she has lived on three continents: Londoner at heart, Berliner by default, and Beijing-inspired.

Dominique Burkard

Principal Industrial and UX Design Manager, EAO AG

Expert in HMI Product and System Design

Since 2021, Dominique has played a leading role at EAO AG, focusing on industrial and UX design within the realm of product innovation and development. His expertise lies in harmonizing usability, aesthetics, and ergonomics with market demands and customer needs during the initial stages of product definition and conceptualization.

With a 25-year career in development and industrial design, Dominique has contributed to renowned companies including Emerson, Viega, Sika, DePuy Synthes, Schaffner EMV, and Hilti. His accomplishments are highlighted by several patents and design awards.

Michelle Castañeda

Principal Service Designer, Deutsche Telekom AG

Expert in Service and Concept Design

Michelle is the Design Lead for the AI Competence Center at Deutsche Telekom. In this role, she drives the development and implementation of design strategies that empower Deutsche Telekom's employees and customers by leveraging AI effectively through new GenAI products and services.

Michelle has a proven track record of more than 10 years in innovation teams, leading projects both internally and as a strategic design consultant in the APAC, LATAM and EMEA markets. Her passion lies in user-centered design, making her a strong advocate for the user's voice within multidisciplinary product development.

With a background in industrial design and a Master of Science (MSc) in IT and Product Design, Michelle bridges the gap between user research, business goals, and technical feasibility. This sweet spot allows her to craft impactful design concepts that resonate with users, and ensure success for both the business and the customer.

Max Eicher

Senior Industrial Designer, Product Owner
Refrigeration Design, Brand Siemens, B/S/H/

Expert in Industrial Design

After studying industrial design at the University of Applied Sciences in Munich, Max worked independently for several years, focusing on furniture, children's toys and trade fair design, before entering the world of household appliances at BSH almost 20 years ago.

Since then, he has dedicated himself to the design of large household appliances. His primary focus lies in the development of innovative product concepts including all of their user layers. In recent years, he has focused on refrigerators and freezers and the diverse and globally diverse user requirements for modern home appliances.

During his work at BSH, Max also supervises cooperation projects with universities. Together with his team, he won numerous design awards for his company.

Kathrin Eichhorn

Lead UI Design, Experience One

Expert in Digital Product & Service Design

In her current role as Lead Designer at Experience One, an agency specializing in digital solutions at the intersection of technology, design, and strategy, Kathrin has taken on the responsibility for conception and design for platforms, services and applications for clients such as Bosch, Liebeskind, Mercedes, Baufritz, and ETAS over the past six years.

Another significant focus of her work involves consulting, planning, and implementing both small and large-scale design systems, in addition to leading a team of four designers – supporting them in executing their projects and fostering their professional development.

Before her time at Experience One, Kathrin's responsibilities at gosub Communications and Edelman encompassed diverse tasks in design and campaign development. During those seven years, she contributed to projects for companies and brands such as Alete, C&A, Rodenstock, Ferrero and Capri-Sonne.

Grace Fan

Design Director, Pinterest

Expert in AI, Monetization, Ecommerce and AR/VR Design

Grace currently serves as the Design Director at Pinterest, where her focus lies in advocating for responsible AI, developing monetization strategies for long-term business success, and crafting effective and thoughtful product experiences through user-centric design.

Grace's extensive career in design leadership spans various industries, including tech, retail, and finance. She has worked with prominent companies such as Meta, Amazon, and BlackRock.

Notably, her most recent and exciting experience was at TikTok, where she took on the role of Head of Design for the US market. During her time there, she established a fully functional product design, research, and content design team, resulting in a significant business impact globally.

Ingolf Heinsch

Head of Experience, Vehicle Design,
Volkswagen Group Future Center Europe

Expert in Strategic and Applied Interaction Design

Ingolf's passion is to inspire people as they interact through and with technology. He works at the intersection of design, art and technology.

As part of a team of talented researchers, designers and engineers Ingolf supports the brands of the Volkswagen Group on UX design issues – from strategic direction to handover-ready prototypes. In his role, he also supports transformative business processes.

Before joining the Volkswagen Group in 2018, he spent over a decade designing and developing spatial experiences and interactive exhibitions. His diverse work for international clients and artist collaborations has won numerous awards.

Ingolf is a founding member of NODE – Forum for Digital Arts and has taught at various universities.

Tae-Young Kang

Director, Customer Experience Design, Deutsche Telekom AG

Expert in Digital Product Design and Service Design

Tae-Young is a Director of Customer Experience and a Product Lead at Deutsche Telekom who holds around 20 years of experience in UX and service design. Currently, he focuses on streamlining and digitizing Deutsche Telekom's customer-centric innovation process, leading a team to implement a corporate-wide collaboration platform that accelerates idea collection, target customer validation, and data-driven concept prioritization.

Previously, he worked at Samsung Electronics for over 15 years, where he cultivated extensive hands-on experience in the end-to-end product innovation process – leading diverse projects from new product development to production model enhancement and shipping to global audiences, including the Galaxy Smartphone series.

Tae-Young studied Service Design (M.A.) at the Royal College of Art in London and Visual Communication Design (B.A.) at Hongik University, School of Design Convergence, in Seoul.

Monika Khanna

Senior Manager, Product Design, ServiceNow

Expert in UX Design, Information Architecture,
Product Design and Service Design

Monika is a highly accomplished design leader with more than 15 years of industry experience as a specialist in crafting exceptional user experiences. She is a visionary who blends strategic thinking and creative passion in a unique way, and dedicated to fostering a culture of empathy and innovation. Monika has a proven track record of collaborating with executive leadership globally, delivering impactful design solutions, and building high-performing teams.

She embraces culture, innovation, and new trends in design and technology to solve complex challenges. A noted LinkedIn and Pluralsight author, Monika also is a sought-after international speaker and dedicated mentor.

Jessie Kitchens

Senior Product Design Manager, Reality Labs, Meta

Expert in AI Assistants in Smart Home, Robotics, and AR/VR

Jessie is a Senior Product Design Manager supporting assistant technology development for new hardware products at Meta Reality Labs. She is an advocate for responsible innovation, opportunities to democratize access to information, and developing technology that meets humans where they are v. the other way around.

Jessie's background is in the performing arts and her pathway into tech was a winding one; she's particularly interested in how bringing diversity of thought and background to the product development process can transform the way we approach design work. Prior to Meta, she was working on Human Robot Interaction patterns and software design for Astro, Amazon's first home robotics product.

Oliver Kulpi

Co-CEO, Digital Experiences Group

Expert in CX Strategy and Digital Transformation

Oliver is a seasoned strategy executive with a track record in large-scale digital transformation programs for mobility, manufacturing, luxury and healthcare. He leads the Experience Design team at Valtech and is passionate about the intersection of technology and human-centered design, which he experimented with already back in the 1990s when graduating at HdM Stuttgart.

In his career he founded New Zealand's first web design agency, developed driver assistance tools to improve autonomous driving, designed the first fully digital car dealership on high street, introduced direct-to-consumer solutions for OEMs and iconic luxury brands, and enabled life science companies to become patient-centric.

Today, Oliver fosters digitization in established industries and helps to transform business models through design thinking, with accessibility being one of his focus areas.

Joon-Mo Lee

Managing Director, PHOENIX Design, Autumn Jury Chair

Expert in Research and Innovation

Joon is Managing Director at PHOENIX in charge of the PHOENIX Studio in Munich. A distinguished graduate from Central Saint Martins College of Art and Design in London, his client work and public talks explore the intersection of philosophy, culture, design and innovation.

Before entering the design industry, he has worked in the toy and FMCG industry in Düsseldorf, Berlin, Hong-Kong and London. In his past engagements he has collaborated with a broad range of leading brands including LG, Samsung, Boeing, Huawei, BSH, Neff, Hansgrohe, Vorwerk and Schindler.

Joon likes travelling with his camera, loves seafood, has a palate for cheap booze, and enjoys Karaoke nights with his team.

Cagri Mercan Bozok

Lead Product Designer, N26 Bank AG

Expert in Experience Design in Fintech

Cagri draws on more than ten years of experience in cultivating design excellence for products in various sectors, with a particular focus on the fintech industry. Her work is characterized by a strong commitment to leveraging the inherent value of design in products and driving the level of maturity in design.

Alex Mulder

Associate Partner, Prophet

Expert in Product and Service Design

Alex is a Creative Director, Product and Service Design in Prophet's London office. His passion lies at the intersection of human interaction with technology and specifically in more complex B2B2C environments.

Prior to Prophet, Alex was Creative Director and partner at Nimble-tank and developed his craft in various agencies from New Zealand to the United Kingdom over the last 17 years. From digital product design to holistic ecosystems, he has helped businesses deliver meaningful, functional, and impactful experiences. Alex has a BA in Design from the University of Auckland.

Dr. Anna Raveling

Product Owner UX, B/S/H/ Home Appliances Group

Expert in Design, UX, Design Research and Design Strategy

Anna has significantly influenced user experience, design pre-development, and strategy at BSH Home Appliances Group. Her journey from industrial design through product marketing and innovation management to her current role as Product Owner User Experience highlights her expertise in user-centered processes.

She leads project teams focused on developing and implementing global user-centered product and design processes. In addition to supporting UI and industrial design projects, she conducts design research to promote user experience throughout the organization.

Anna also contributes to academia, sharing insights on sustainability, design methodologies, and UX research. With a PhD from the Technical University of Munich (TUM), she has been teaching at various design schools since 2005, enriching the next generation of designers with her knowledge.

Tim Richter

Head of Product Design, Siemens Healthineers

Expert in Industrial Design and UX

Tim leads the Siemens Healthineers Industrial Design team, collaborating with the Design & User Experience department to create products across all modalities. He oversees guidelines like Shui Industrial Design to ensure high-quality design throughout the product range.

Previously, Tim was Head of Group Design at VAILLANT, shaping product design strategies for three brands, focusing on UI/UX and packaging. With over a decade of international experience, he worked with clients such as Siemens and Nike while serving as VP at s.point design in Shanghai and establishing the BSH China Industrial Design Department in Nanjing. He also founded Naolab to explore innovative design solutions.

Tim's career spans communication design, industrial design, engineering, and manufacturing, grounded in his belief that design connects. He graduated as a Diplom Industrial Designer from the University of Applied Sciences Darmstadt in 2002.

Annika Rupp

Senior Concept IA, Scholz & Volkmer

Expert in Digital Information Architecture

Annika is a Senior UX Concept at Scholz & Volkmer's Berlin office. She enjoys working in an agile team, collaborating closely with UI designers and developers. When creating digital solutions for different clients such as Deutsche Bahn or HARIBO, her focus is on information architecture guided by user behavior and needs. She is particularly fascinated by a user experience that considers psychological wellbeing and addresses social or environmental challenges.

Annika studied business communication (MA) and media economics (BA) at Stuttgart Media University with exchanges in Mexico and Chile. She likes to explore different points of view and gain a deep understanding of the context as well as its implications for business objectives.

Sofia Ryan

Principal Design Director, Microsoft

Expert in Co-creation, User Research and Business Design for AI, Healthcare and SaaS

Sofia Ryan is a Principal Design Director at Microsoft. She creates UX visions and strategies that bridge AI design goals with business objectives in the Microsoft 365 product ecosystem.

Sofia holds a master's degree in product design and a PhD in user research and co-design. Her drive to connect design leadership skills with business strategy development led her to also take an executive MBA.

Sofia has worked as an academic researcher, design practitioner, chief product officer, and design leader. She has built global design teams and UX strategies in both larger enterprises and startups. She uses this broad experience not only to improve UX maturity in companies, but also to evolve design as a discipline to ensure that design gets a seat at the table.

Matthias Schmiedbauer

Strategic Design Director and Partner, Manyone Munich

Expert in Customer Experience Design

As Strategic Design Director at Manyone, Matthias focuses on the convergence of strategy, design, and technology, promoting human-centered innovation that meets both practical and emotional needs. He excels in transforming strategic visions into reality by fostering collaboration among teams of researchers, designers, and builders.

Prior to Manyone, Matthias led transformation projects at frog design for brands like BMW and Lufthansa. He has established design and innovation teams, co-founded the Munich studio for Star, and developed JBL's in-house design team at Harman International in Shenzhen. Matthias studied Product Design at HS Munich and the Umeå Institute of Design in Sweden.

Bernhard Staiber

Unit Lead and Fellow, Intuity Media Lab

Expert in Service Design and Innovation

Bernhard is an experienced designer and unit lead at Intuity Media Lab in Stuttgart, Germany. With a desire to challenge established thinking, he helps organisations discover potential and re-align their service strategy. Enthusiastic about robust service design, he and his team follow initiatives from the initial spark to realisation.

Bernhard strives to use UX as a strategic tool by including business and societal goals as vital factors. In addition to his experience in a wide range of industries, he also benefits from his background in business administration.

Mine Danişman Taşar

Senior UX Designer, Philips Experience Design

Expert in Digital Healthcare Design

Mine creates user experiences in healthcare. With 15+ years of experience, she not only steers innovation projects but is also passionate about improving current experiences for longstanding products and services. She works with a global team of designers and in close collaboration with clinical professionals and hospitals. Her design expertise has been applied to a range of clinical domains, including oncology, pathology, genomics, sleep & respiratory and patient monitoring. She strives to craft seamless and effortless experiences for both patients and professionals.

Mine studied product design, followed by a master's degree in user experience design at Umeå Institute of Design, Sweden. She designed edutainment applications for children in the early years of her career. She is currently a Senior UX Designer at Philips Experience Design, based in the Netherlands. She enjoys traveling to explore new cultures, human psychology & physiology, machine learning and cooking to host feasts with friends.

Hamed Yahyaei

Europe Manager, IxDF, Senior Customer Success, Trustee and elected representative of Union for University Graduates, Scania Group

Expert in Experience Design, CX, Service Design and Design Thinking

Hamed is a Customer Success professional at Scania Group in Sweden, focusing on premium Customer Experience and promoting inclusive practices. He serves as a trustee at Scania Akademikerföreningen and co-founded the VW Group Digital Meetup.

With over 18 years of experience in design, Hamed is involved in global Design Leadership & Mentorship, holding roles with organizations like the Interaction Design Foundation and IxDA. His achievements include awards for visual experience, innovation in transportation, and smart city solutions at various hackathons and challenges.

Award Category Product

“My evaluation perspective is really rooted in the question of: ‘Is there sound thinking, is there a real insight or is it just another product?’ I do want to hear the story behind the actual product.”

— Joon Mo-Lee, Autumn Jury Chair, UX Design Awards

Among submissions from over 50 nations, the jury nominated a total of 117 projects to compete in the Product category, which is open to market-ready or new products, services and environments.

Among the 117 nominees, the juries bestowed one Gold Award and 13 Product Awards.

Congratulations to all winners and nominees in the Product category!

Mahlkönig's *EK Omnia* coffee grinder is the newest member of the product family. Key features include three grinding modes, from classic to automated, a hybrid interaction concept merging physical and digital user experiences, combined manual and motorised adjustments, and a real-time precision of 1 micron (0.001 mm) when setting the distance of the grinding disks.

Company:
Mahlkönig

mahlkoenig.com

Design Studio/Department:
IMAGO Design GmbH

Design:
Camillo Koenig, Michael Kohlbecher,
Bastian Renner, Veronika Thalhammer,
Stefan Thalhammer, Alexander Wiethoff,
Florian Künzel, Daniel Meyer

UX Design Award | Gold
EK Omnia

“The Gold Award goes to a coffee grinder showcasing top-tier qualities: consistent design, automation, a user-focused approach based on thorough research. Different modes can be remotely controlled, targeting people according to their knowledge, solving service quality problems caused by staff shortages and lack of knowledge sharing. The combination of a physical ring and a digital touchscreen allows logical interaction and skillfully bridges the gap between software and hardware. Through its meticulous and clean product design, high-end material quality, and intuitive user guidance, this excellent product leverages connectivity and automation to improve efficiency, and addresses reparability and waste reduction, adding to its holistic appeal.”
— Annika Rupp & Tim Richter

UX Design Award | Gold

EK Omnia

Cashee is a UAE-based digital banking platform tailored for teenagers in the MENA region. Cashee is on a mission to encourage financial literacy and financial inclusion for youth. It provides teenagers with a free digital banking app and prepaid card to manage their money effectively, while offering parental control over children's transactions.

Company:
Cashee Tech

Website:
cashee.com

Design Studio/Department:
The Gradient

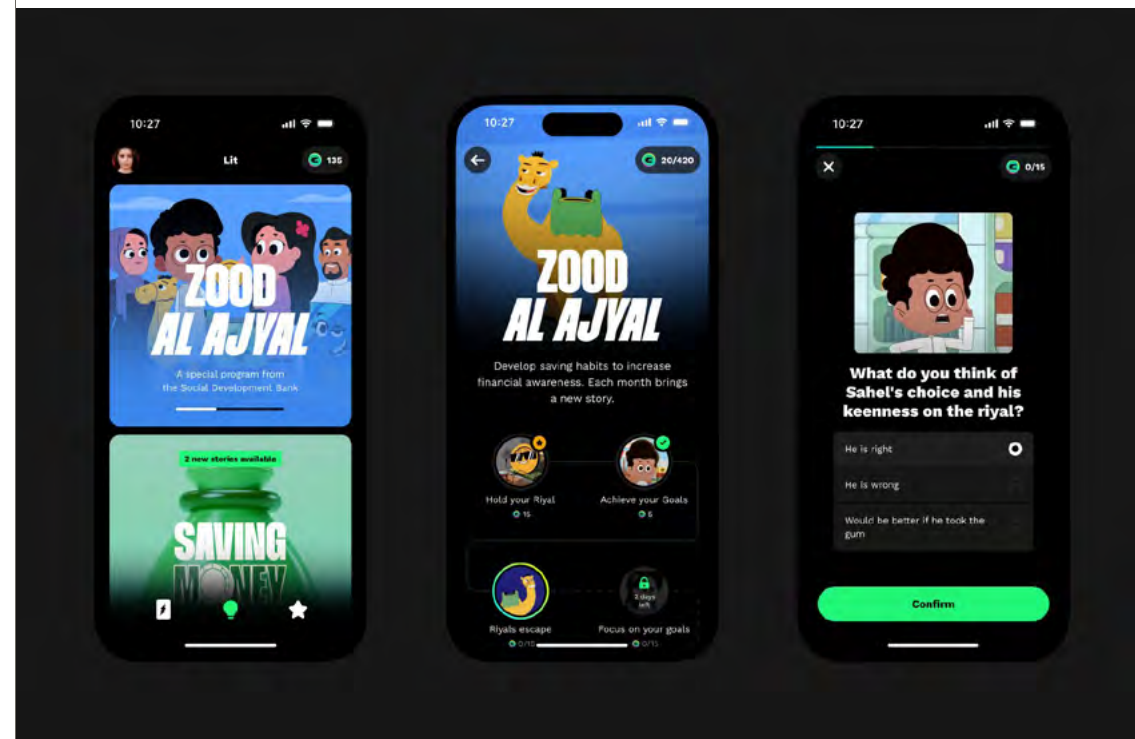

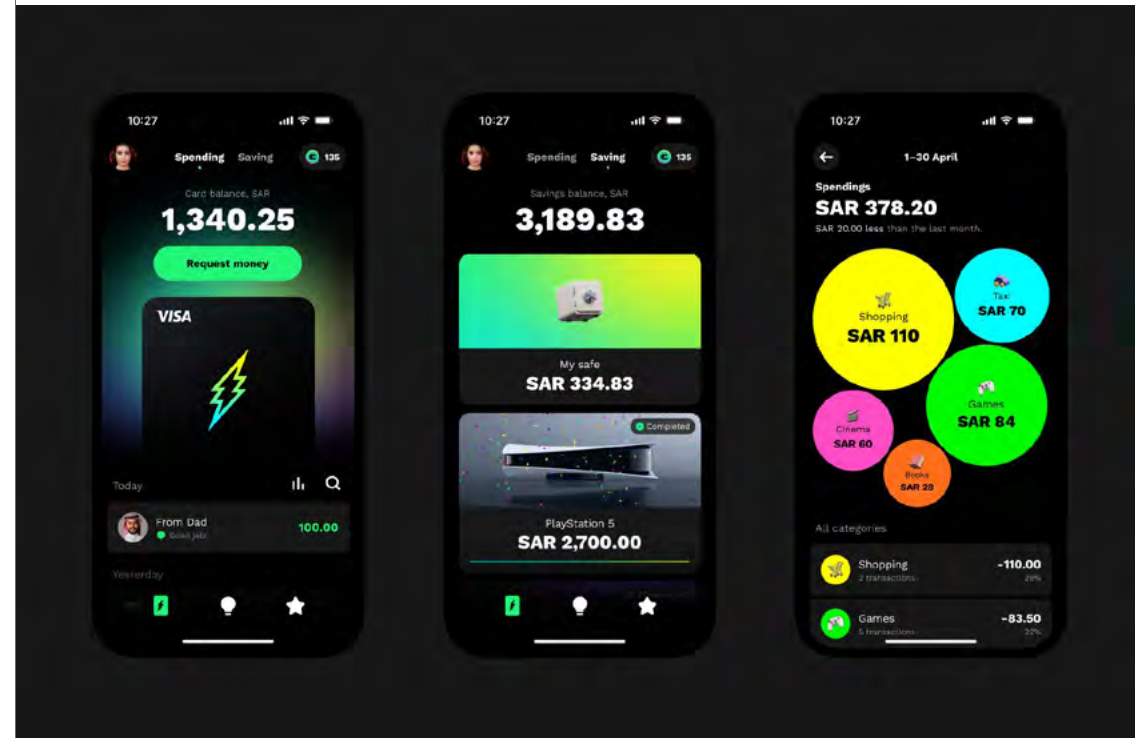

Design:
Oleg Gasiyshyn, Viktor Hotskivskiy,
Sasha Shumylo

“Cashee innovates banking for the youth, aligning with evolving money formats and modalities. The app features a modern design, clean UI, and gamification elements, creating a novel value exchange. It educates future generations about finance and empowers both children and parents by offering a fresh take on spending habits. This approach reflects banks’ adaptation to changing financial landscapes, driving business value through financial literacy.”

— Monika Khanna & Alex Mulder

Banking for the youth

CleanMy®Phone by MacPaw is an AI-driven app for iPhone and iPad designed to declutter and organize storage, creating space for new memories. With three modules – Declutter, Organize, and Network – the app allows users to swiftly clear out all unnecessary images, efficiently sort and polish photo libraries, and easily test connection speeds for optimal online activity. *CleanMy®Phone* transforms digital space management, ensuring devices remain clean and user data protected.

Company:
MacPaw

Website:
macpaw.com

Design Studio/Department:
CleanMy®Phone

Design:
Semeon Hrozian

“Every day, people worldwide produce 6 billion new digital images. Many disappear in archives never to be seen again, or kept ‘just in case’. We’re led to believe that digital is ‘limitless’, but digital things are real things, and digital waste is real waste. MacPaw turns the burden of cleaning into a sexy and well-paced experience that takes away the fear of letting go and helps to focus on keepers.” — Joon-Mo Lee & Hamed Yahyaei

Millions of customers want to have access to Deutsche Telekom's fiber network. However, the buildings they live in are not yet connected. In order to lay fiber optic cables to their homes, hundreds of construction companies need to be coordinated – and each construction step needs to be individually arranged with customers. To offer everyone full transparency and planning security, the *Fiber Hub* was developed: a central platform where customers can participate live in the expansion progress.

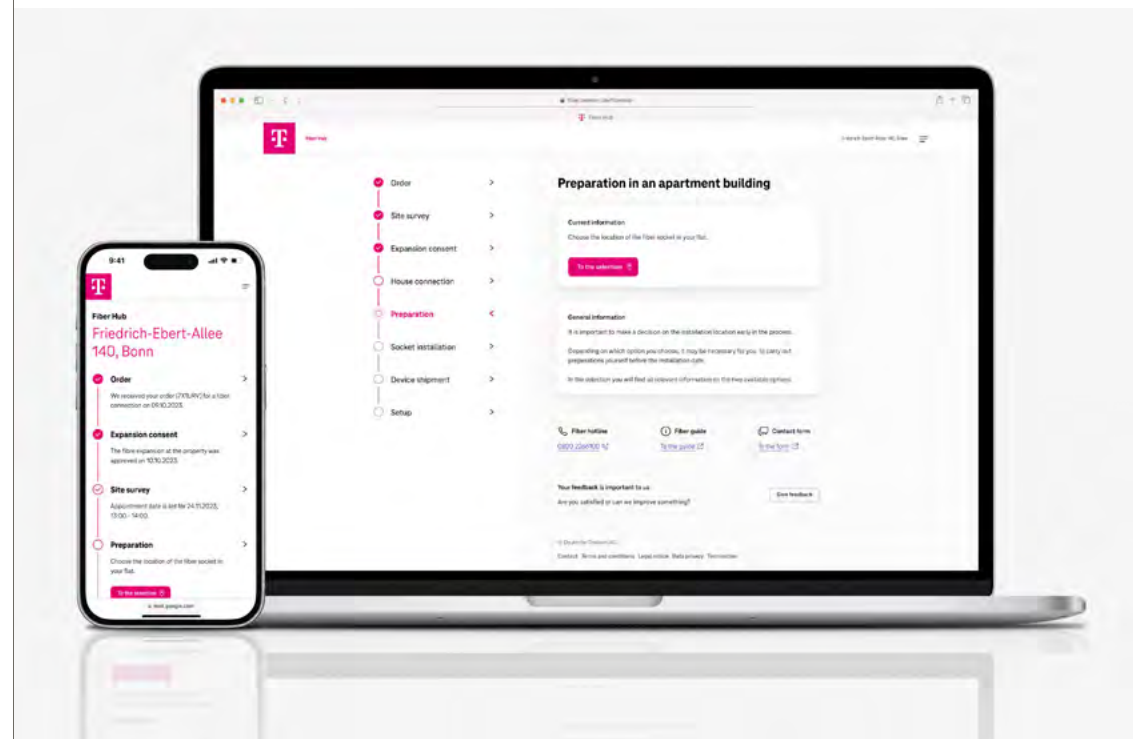

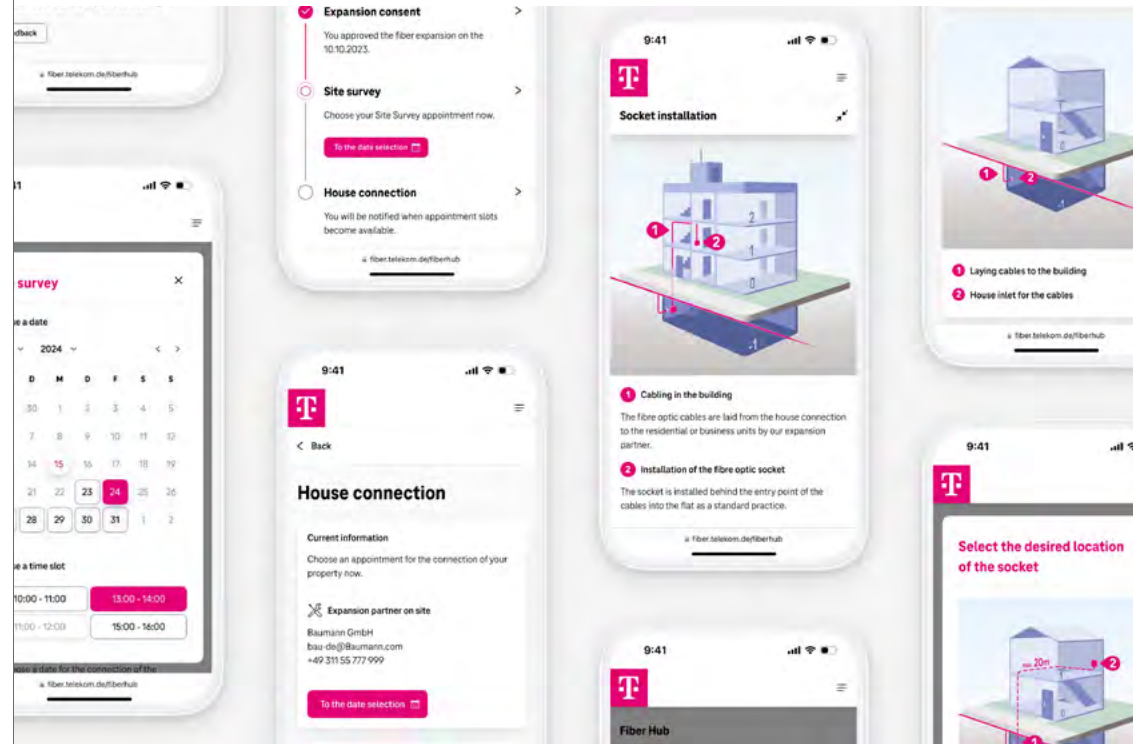

Company:
Deutsche Telekom AG

Website:
telekom.com

Design Studio/Department:
Deutsche Telekom Design
& Customer Experience

"Fiber Hub highlights an area of clear business value: the importance of improving digital infrastructure in urban and rural areas. The solution takes into account different user groups and their needs by providing tailored information according to roles and responsibilities. The content is well structured, texts are easy to understand and to the point. The visual design is uncluttered, consistent and in line with Telekom's brand identity. Fiber Hub is an example of successful digital inclusion by providing a secure access to various stakeholders and keeping them informed throughout." — Ingolf Heinsch & Max Eicher

Finix is an integrated payment platform which empowers vertical Software-as-a-Service (SaaS) companies with embedded payment services. It offers fast new merchants onboarding, seamless payment monitoring, scalable dispute management and customizable business insights. Thus, SaaS companies can streamline cross-team workflows to scale, with more time spent on revenue strategy.

Company:
Finix Payments, Inc.

Website:
finix.com

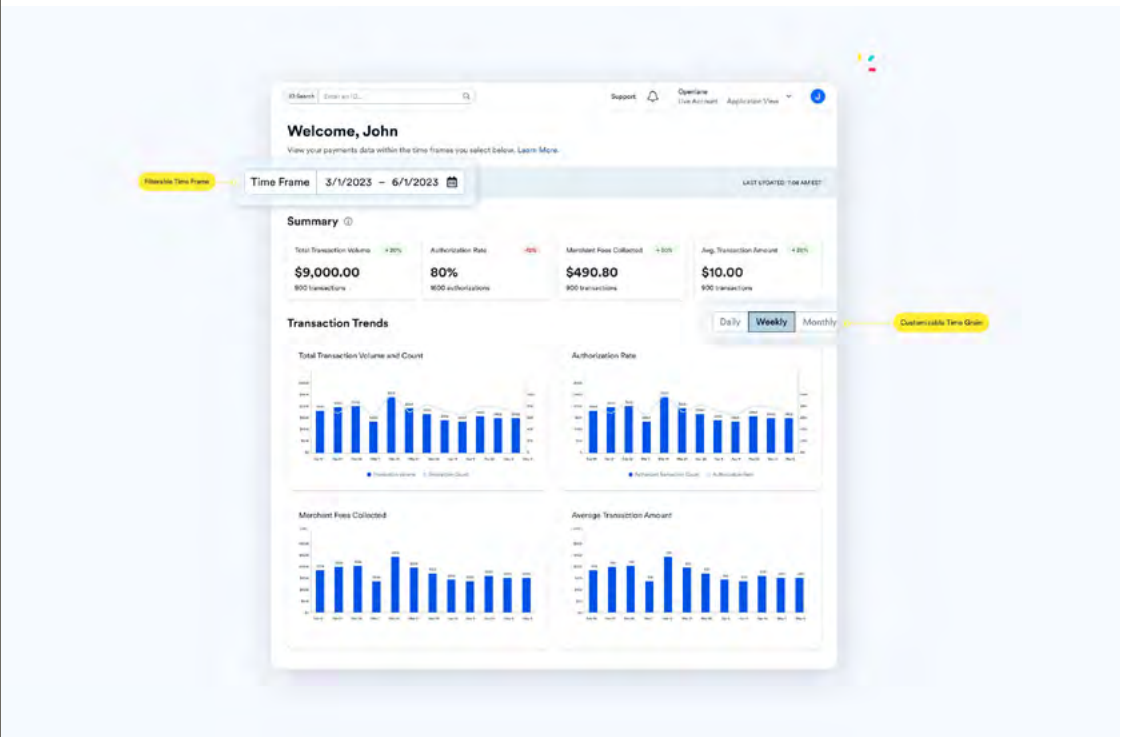

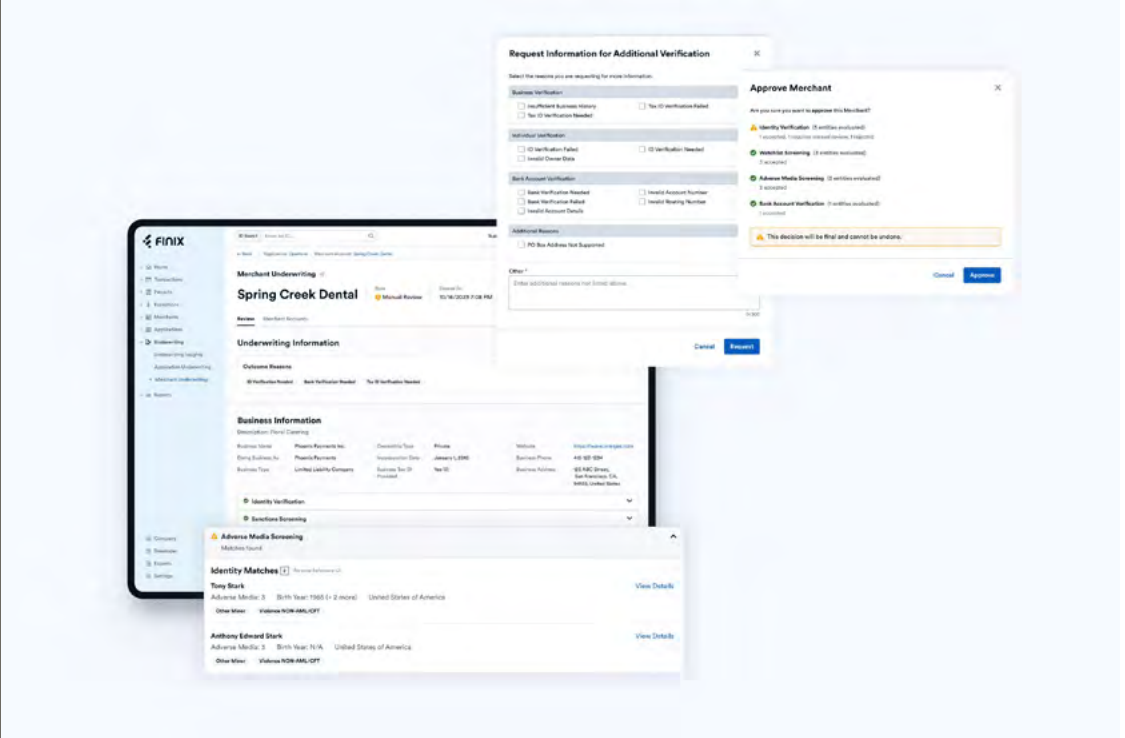

Design:
Mengzhu Ouyang, Shrankha Narya,
Juanita Lee, Jes Albro, Kyle Light

“The design process of *Finix Payment Management Dashboard* is informed by in-depth and thoughtful user research, resulting in a polished and easy-to-use interface. The powerful SaaS tool aids in task prioritization, evidence gathering and expedited decision-making through prioritized escalation/disputes paths, enabling small businesses to leverage sophisticated solutions. Overall, the *Finix* solution shines through its reliable and rapid payment management system, which is crucial for businesses to start and scale successfully.” — Grace Fan & Jessie Kitchens

Finix Payment Management Dashboard

N26 addresses IBAN discrimination, crucial for expatriates and global citizens often crossing borders. Its service ensures smooth transitions across the European Union with local IBANs. Customers can keep their existing bank cards and transaction history, enabling seamless access to account features when opening a new local IBAN. N26's dedication to seamless, borderless banking bolsters mobility and financial inclusion, significantly aiding the expatriate community.

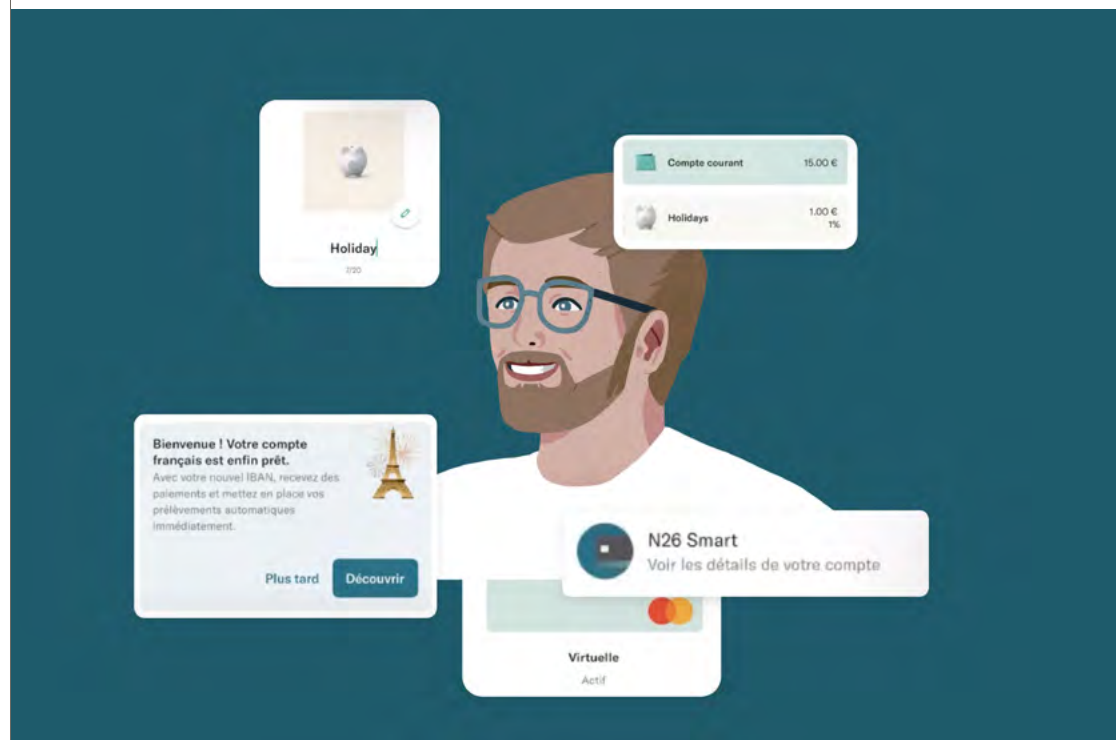

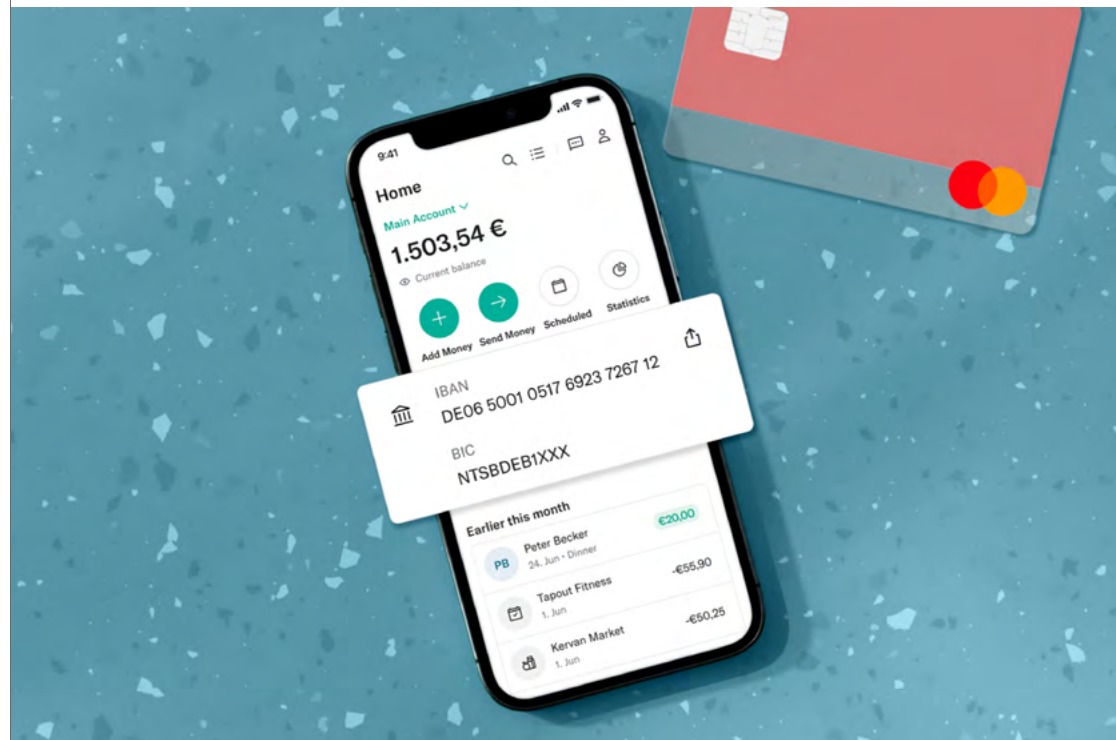

Company:
N26 Bank AG

Website:
n26.com

Design:
Cagri Mercan Bozok,
Jolene Tan-Davidovic, Hannah Weiser,
Alex Bailon, Alba Ten, Juan Useche

“IBAN discrimination occurs when companies in the EU reject transactions from accounts with a foreign IBAN, causing financial inconvenience and barriers for expatriates. N26 proactively addresses this problem by introducing *IBAN Switch* as a convenient feature in their banking app. The appealing visual design emphasizes simplicity and consistency, while a step-by-step wizard guides the user through the process and elegantly reduces complexity. N26’s seemingly niche solution adeptly addresses a real challenge by providing a lightweight and trustworthy banking experience.” — Gennett Aku Agbenu & Matthias Schmiedbauer

İşCep is the mobile application of İşBank, Turkey's largest private bank. Beyond banking transactions, *İşCep* is evolving into a Super App, offering a range of lifestyle mini applications through partnerships related to users' vehicles, houses, families, and travels that cater to their needs throughout various life stages. *İşCep'le Hayatım*, builds a comprehensive ecosystem within *İşCep*, where users can access all the banking and unique lifestyle services they need through collaborations.

Company:
Commencis

Design:
Feyyaz Çoban, Doruk Yavuz,
Yağmur Gökçe

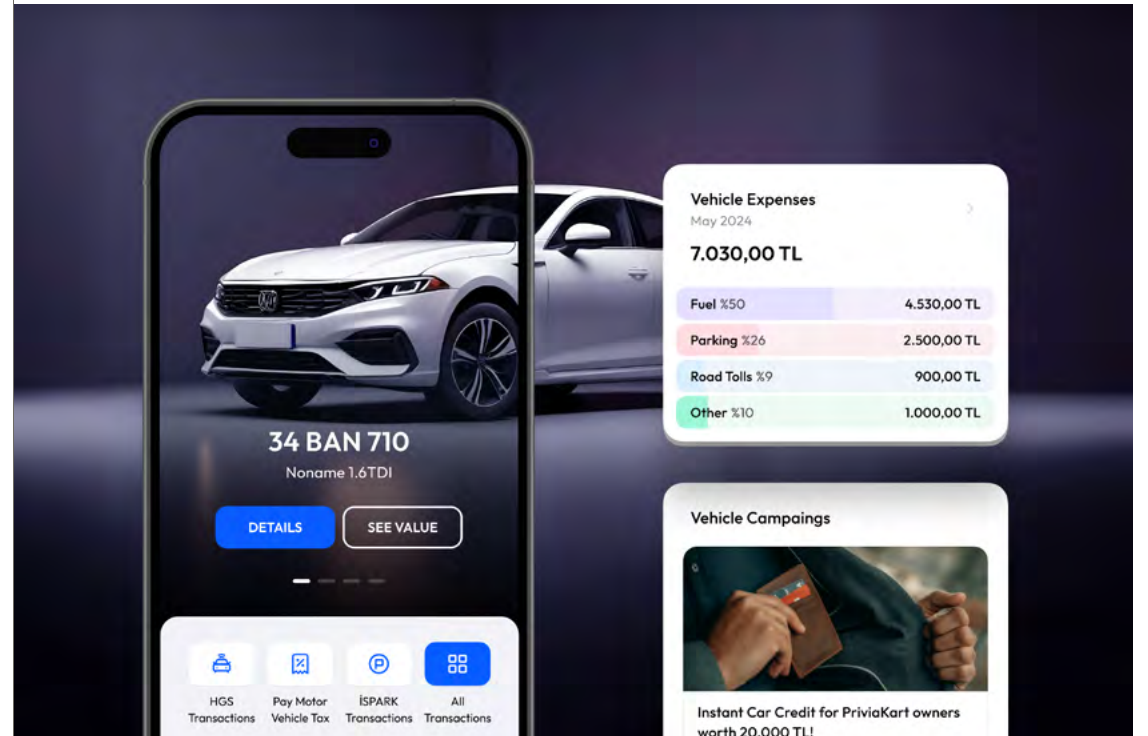

Website:
isbank.com.tr

"*İşCep'le Hayatım* extends beyond traditional banking, offering a wide range of services within one financial ecosystem. It provides insights into expenses and payments, enabling comprehensive wealth management. While the Super App concept is not novel, its unique positioning offers significant added value. The well-executed, brand consistent design seamlessly integrates third-party providers. The clear information hierarchy delivers a user-friendly experience, consolidating various financial aspects of daily life."

— Cagri Mercan Bozok & Oliver Kulpi

İşCep'le Hayatım
Lifestyle Meets Digital Banking

Knox Manage is a powerful solution that simplifies the way IT administrators remotely manage their mobile fleet. Whether they work for a small-medium business or a multinational enterprise, the main challenge for an IT admin is maintaining their organization's IT infrastructure through secure device management. This product comes with all the core configuration settings needed to help a business run, from device data protection to network connection options.

Company:
Samsung Electronics

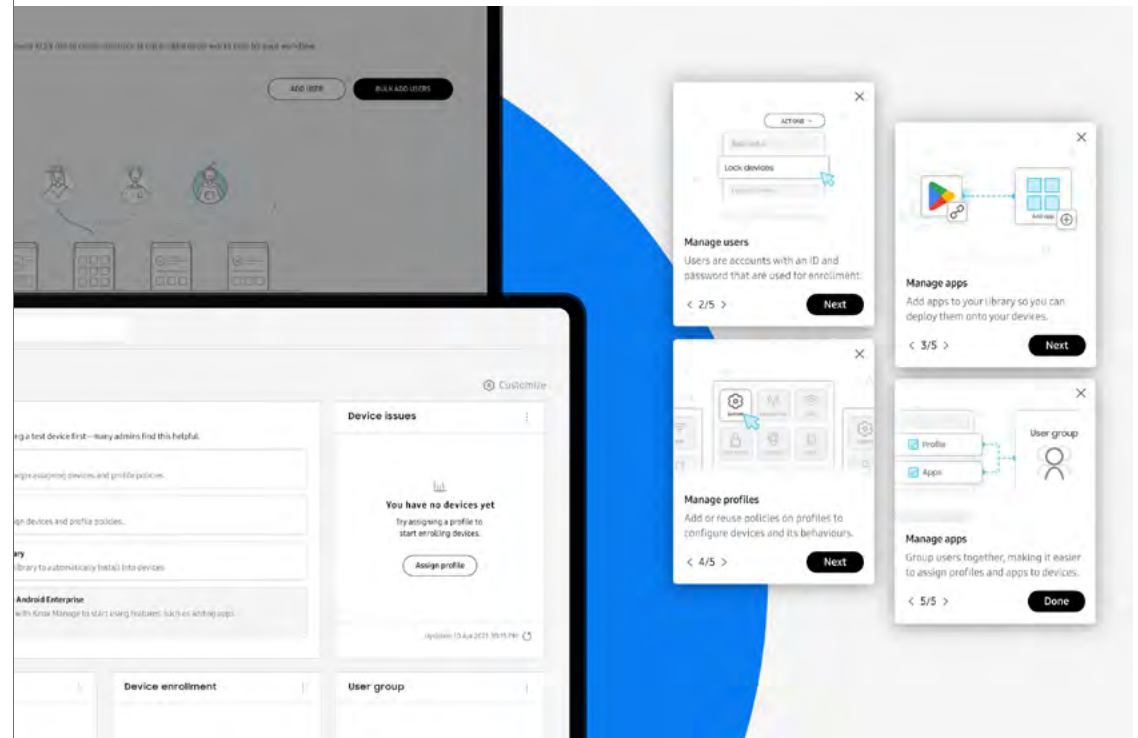

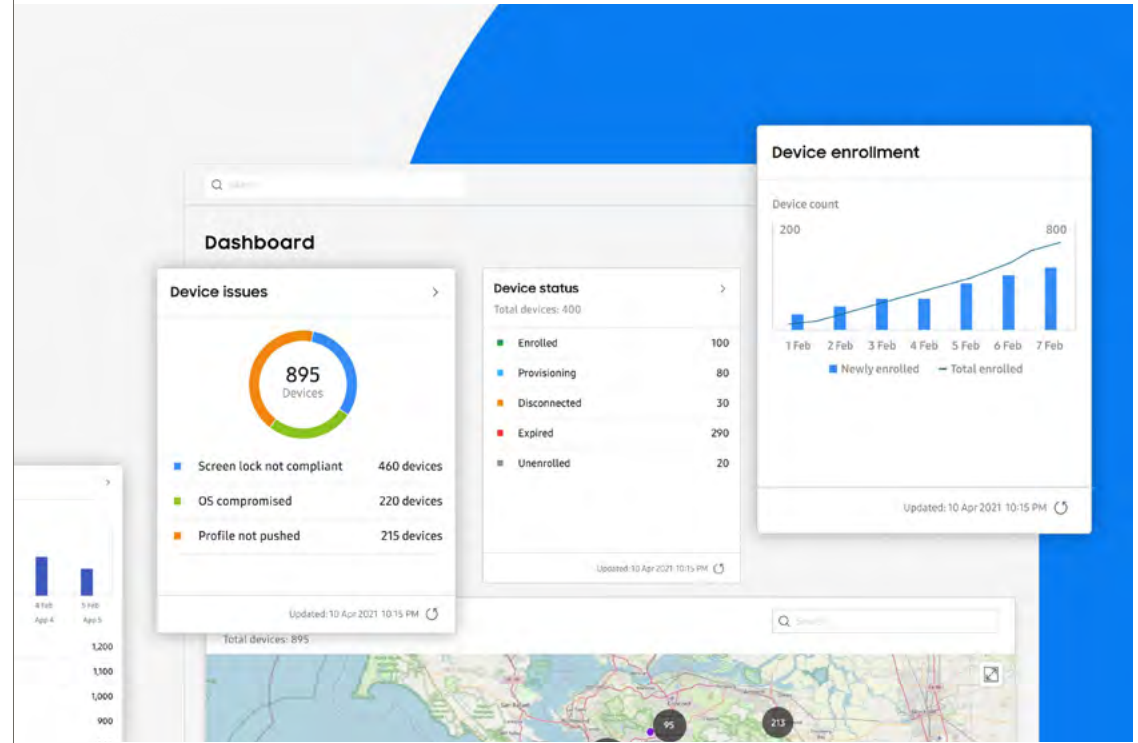

Website:
samsungknox.com

Design Studio/Department:
Samsung R&D Canada

Design:
Tian Jia, Jessica Yuki Huang, Eliza Lim,
Maia Puyat, Sabrina Kan, Rock Leung

“In the complex world of device management, this solution provides a unified hub and streamlined workflow, tackling a crucial yet often overlooked IT challenge. It drives business value by enhancing product lifecycle management through tool consolidation. Offering scalability and B2B efficiency with intuitive processes, it meets industry standards while effectively addressing user needs with minimal effort.”
— Monika Khanna & Alex Mulder

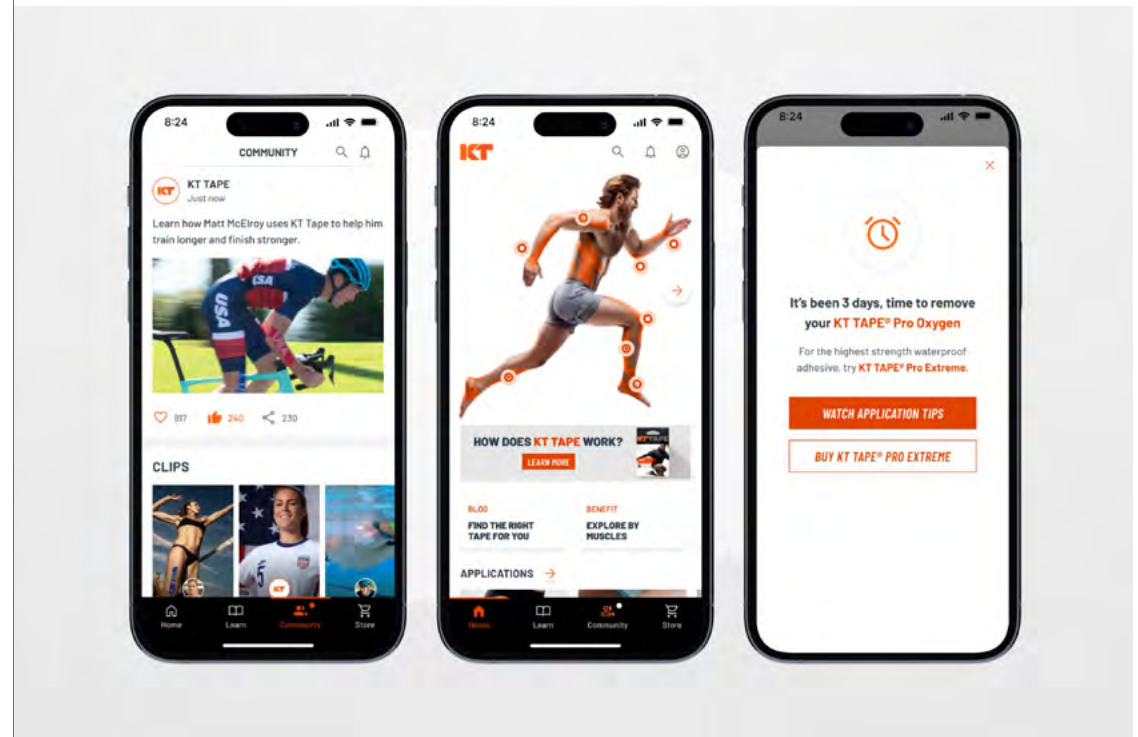

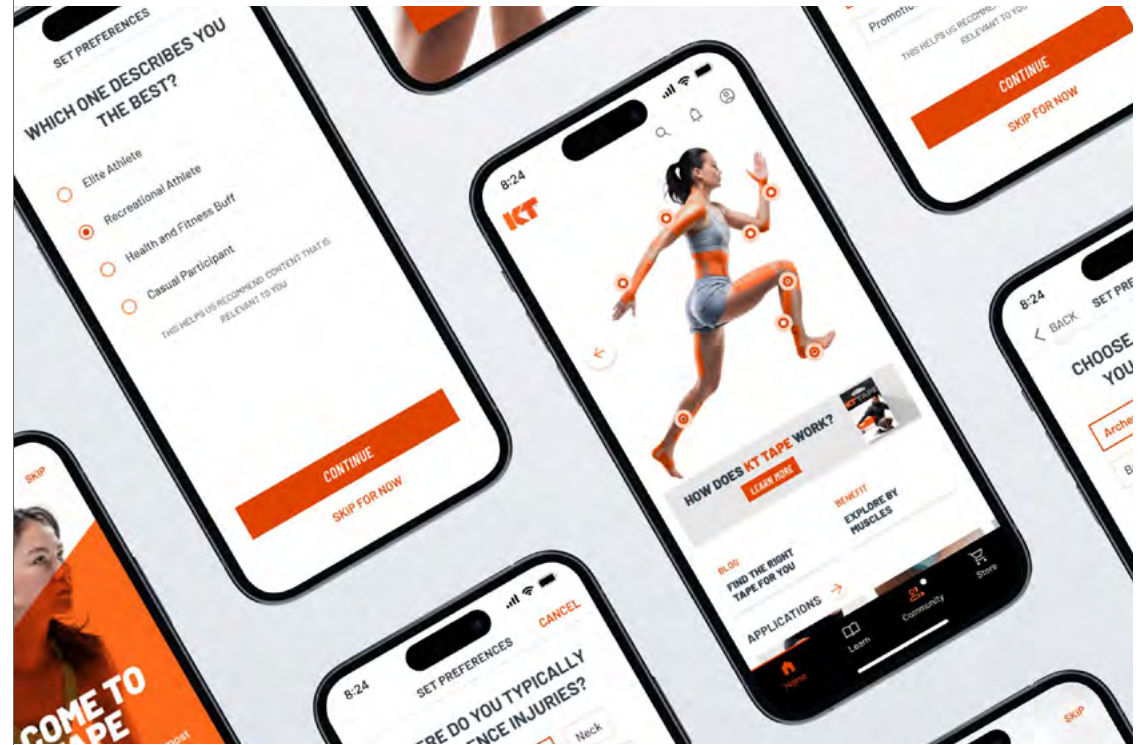

KT Tape, a leader in sports and therapeutic kinesiology tape, provides elastic sports tape for pain relief and muscle support and is widely used by athletes and therapists. Renowned for quality and innovation in sports medicine, KT Tape emphasizes education and practical application. To enhance customer experience and product use, KT Tape collaborated with Momentum to develop a mobile app that guides users in product applications, improving their understanding and interaction with the tape.

Company:
Momentum Design Lab

Website:
momentumdesignlab.com

“KT Tape – Tape Like the Pros highlights the necessity of aiding users in properly and effectively applying kinesiology tape. This app effectively connects the product with educational resources, offering a user-friendly guide that consolidates essential information for easy access. Features such as repeating videos, notification reminders, and an offline mode for use in areas without internet access demonstrate a dedication to meeting user requirements. KT Tape is based on solid competitor analysis, a clearly defined target group, in-depth user research, prototyping and testing. The outcome is a visually appealing and intuitive companion app that convinced the jury with its clear value proposition.” — Gennett Aku Agbenu & Matthias Schmiedbauer

“Nui Care Redesign & AI Enablement presents a forward-thinking approach to the complex, emotional, and cost-intensive topic of caregiving. The integration of AI for a customized user experience sets the app apart in the care sector and underlines the potential of this technology to provide support in ageing societies. The holistic design approach covers various caregiver challenges demonstrating an impressive depth in functionality. Additionally, the thorough and empathetic user engagement in the design process enhances its potential for genuine social impact.” — Kathrin Eichhorn & Tae-Young Kang

“OYSTA drives a holistic approach to ADHD care by connecting patients, caregivers, and medical professionals through data, enabling informed and personalized care. It excels in consolidating diverse data points and uses standardized scales to quantify patient progress. This scalable approach prioritizes personalized care, moving beyond one-size-fits-all solutions. Integrating standardized assessments and progress tracking empowers caregivers to offer better support, enhancing patient well-being.”
— Michelle Castañeda & Sofia Ryan

ProtoPie empowers UI/UX designers to create more with an ecosystem of tools that allows them to create realistic, high-fidelity prototypes without coding.

Company:
ProtoPie

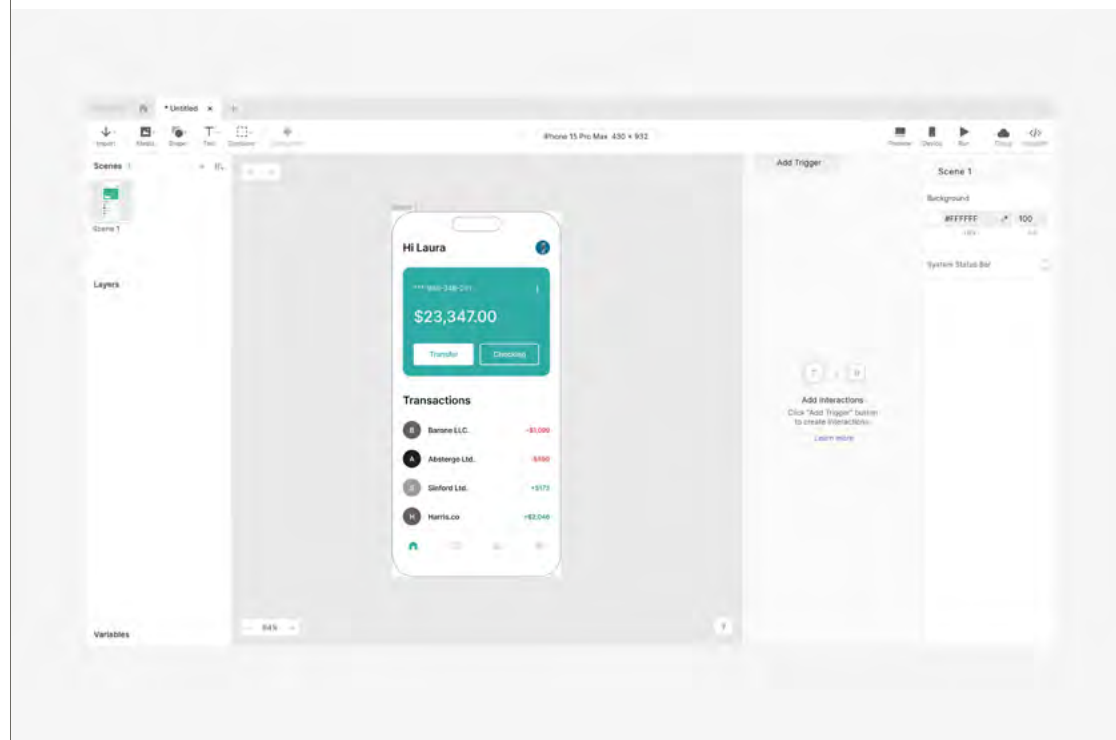

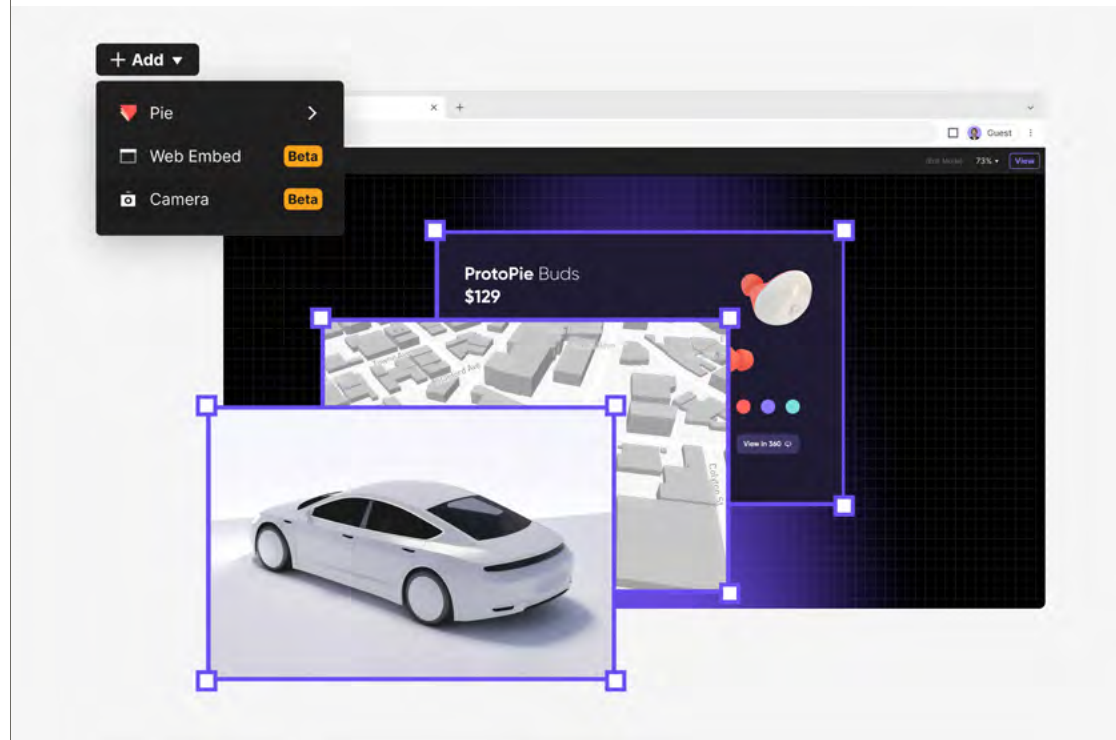

Design:
Tony Kim

Website:
protopie.io

“ProtoPie’s no-code approach makes it a highly accessible tool for design and product innovation. This well-designed, flawless product offers a sophisticated system that combines authoring, previewing and collaboration and supports developer handoff. ProtoPie makes it possible to integrate highly customised hardware components into the prototype setup. Its versatility allows for great creative expression and helps to make sophisticated product ideas tangible for others. While its full range of operations can be demanding, users can start small and grow with the challenge.”

— Mine Danişman Taşar & Bernhard Staiber

SoraHome is an innovative Learning Experience Management Platform. Students are offered a transformative approach to mastery-based education fostering communication and collaboration between school, parents and students. SoraHome enables parents to actively participate in their children's learning process. It offers student-centric features such as: educational journey planner, graduation progress and insights, engaging expeditions and activities learning experiences, as well as student journal and a community, and it achieves a Net Promoter Score of 80.

inflammatix.com

Design Studio/Department:
Engineering

Design:
Chris Wilson, David Dell'Agostino

Product is in development, not for sale, and does not have marketing approval or clearance from regulatory authorities in any jurisdiction.

"TriVerity has succeeded in translating a scientific breakthrough in medical diagnostics into an easy-to-use product. It is well suited to the clinical context, e.g. in a hospital emergency room, and guides even untrained users safely through the necessary steps. The product design is ergonomic. Interaction elements on the hardware, such as the barcode scanner or the sample slide, are well integrated with the touchscreen and allow safe, smooth operation. Thanks to these qualities, *TriVerity* enables faster diagnosis and confident decisions for appropriate treatment."
— Mine Danışman Taşar & Bernhard Staiber

The *DB Rad+* app took the start of the 2024 European Football Championship as an opportunity to offer users a geo-based gamification module. For four weeks, different virtual balls appeared in the city every day as part of the goal fever challenge. With tracking activated, users could cycle to these locations and score goals, with over 100,000 goals having been scored by the halfway point. With the donation function, users can also donate their kilometers to a good cause.

Award Category Concept

“I love to see competence in dealing with complexity. And, another aspect, I know from years of experience: how difficult it can be to deal with rigid technological boundaries, to negotiate different goals and needs, and so on. It can be quite adventurous to be a UX professional. That’s why I appreciate courage. Leave the beaten path and demonstrate fresh thinking. Create a moment of surprise, a smile.”

— Bernhard Staiber, Jury Member, UX Design Awards

This year, the judges nominated 35 submissions to compete in the Concept category. This category is open to short- and long-term foresight projects, such as test projects, MVPs, prototypes, service concepts, research projects and advanced design studies.

Among the 35 nominees, the juries bestowed one Concept Award.

Congratulations to the winning team and to all nominees in the Concept category!

Introducing *GO*, the Intelligent Laundry Care System. With advanced AI, it selects optimal washing settings, minimizes waste with automatic dosing, and adapts to your schedule. It can be seamlessly integrated with users' smart homes, conserving resources while delivering impeccable results.

Company:
Vestel

Website:
vestel.com

Design Studio/Department:
Vestel Industrial Design and
User Experience Center

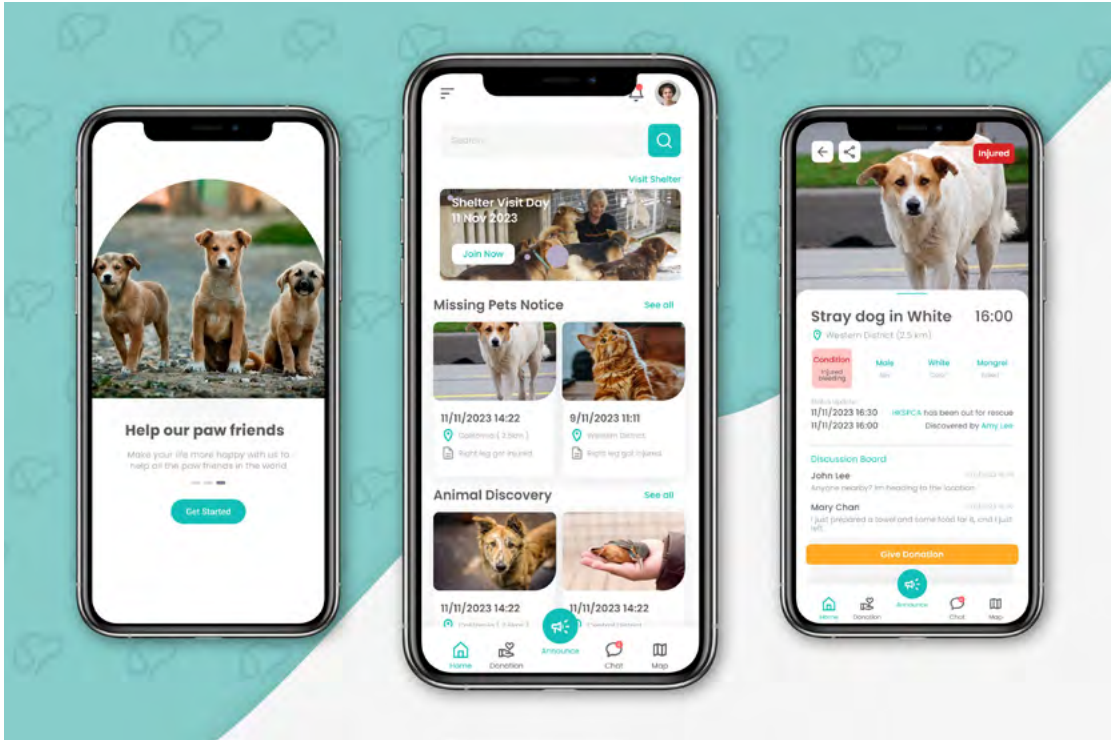

Design:
Ayberk Köle, Şükran Kasap, Burak Erbab

“The concept *VestelGO* is impressive because it cleverly addresses various everyday challenges and combines them into a coherent product. On the one hand, it helps to minimise the ecological footprint of washing (detergent, energy consumption, microplastics). On the other hand, it picks people up at their own pace of life and adapts to their needs. To do this, it orchestrates various hardware sensors, digital services and data from networked private devices and the smart home. The product design is remarkably clear and bold. It combines high aesthetics with a commitment to radical simplicity.”

— Mine Danışman Taşar & Bernhard Staiber

Lost pets and cases of injured animals are prevalent, yet there is a deficiency in platforms that connect individuals with stray animal assistance centers for sharing and reporting. Often, people resort to using social media platforms for such purposes. The *ArkCare* app addresses this gap by offering a consolidated platform for reporting missing animals and injuries. It enables status updates and facilitates donations. Shelters can also directly seek donations and assistance through the app.

Award Category New Talent

“Designers should have a personal commitment to always uphold ethical standards when we bring something into the world. We’re accountable for being part of that process.”

— Sofia Ryan, Jury Member, UX Design Awards

This year, the jury members nominated 135 projects to compete in the New Talent category. This category is open to bachelor’s and master’s projects entered by students, graduates, and universities worldwide.

Among the 135 nominated “young guns”, the judges bestowed one Gold Award and 12 New Talent Awards.

Congratulations to all winners and nominees in the New Talent category!

NOISE is a synthesizer that empowers the user to interactively create the soundscape in the interior according to their own needs and expectations. In addition to masking disturbing ambient noise, e.g. traffic noise, the stimulation with certain acoustic frequencies can improve recovery processes, sleep quality and the ability to concentrate. The interaction with the synthesizer provides spaces to retreat from everyday noise pollution and supports a conscious examination of one's own well-being.

Beyond Visual Design is a new design standard that ensures inclusive design of digital products and shifts interactions beyond the visual to multiple senses. The guidelines aim to ensure functional accessibility for blind people and show that inclusive products can be attractive for all. The project comprises 31 design principles and a case study in which the developed guidelines were applied to three inclusive digital home appliances.

Design:
Felix Cordes, Jeremias Lange

School:
Hochschule für Gestaltung
Schwäbisch Gmünd

Website:
sg.hfg-gmuend.de

Teacher:
Carmen Hartmann-Menzel,
Benedikt Groß

"Beyond Visual Design demonstrates an innovative approach to improving usability for all, with a focus on supporting the visually impaired. This master project stands out not only by seamlessly blending digital and physical accessibility, but also by establishing guidelines for accessibility principles. While more user testing is needed to realize the full potential of the project, the achievement is remarkable and the commitment to pioneering inclusive design deserves praise. The project's proactive stance will inspire UX designers to explore more innovative and inclusive designs, underscoring its significant impact on the field."

— Kathrin Eichhorn & Tae-Young Kang

UX Design Award | New Talent

Beyond Visual Design
Inclusive Design Guidelines

The digital service *blok.it* enables young people to actively shape their neighborhoods. Through a mobile app and a gamified 3D experience users can share their needs into council agendas for transparent decision-making. Users can digitally place their wishes and visually experience their influence. By seamlessly connecting residents and decision-makers, *blok.it* elevates democratic participation, offering an accessible experience that celebrates the influence of young voices in our communities.

Design:
Timm Klotz

Website:
tiklo-design.de

School:
Magdeburg-Stendal
University of Applied Sciences

Teacher:
Steffi Hußlein, Henrik Rieß

“Blok.it promotes civic engagement and is an excellent example of the digital transformation of urban participation. It makes the complex and partially analog process of political participation accessible – especially for a younger generation of digital natives. The solution offers a well-designed workflow to get issues on the political agenda and helps users to draft texts through an integrated AI assistant. The innovative user interface offers an intuitive data visualization and a gamification approach that lowers the barriers to entry, bridging the gap between online and offline. The design is consistent and fits the target group. By encouraging a culture of civic engagement in a stimulating way, Blok.it makes people feel heard and can contribute to strengthening democracy.”
– Ingolf Heinsch & Max Eicher

UX Design Award | New Talent

Blok.it
Shaping neighborhoods together

cosmo is a tablet application in which students discover the English language in a playful, indirect and context-based way. Instead of being controlled by extrinsic incentives, they learn autonomously based on their own interests. This project focuses on how collective learning, meaningful gamification and demonstrating the value of languages can encourage students' intrinsic motivation in the long term.

Design:
Sarah Franke, Sabrina Kuom,
Paula Trummer

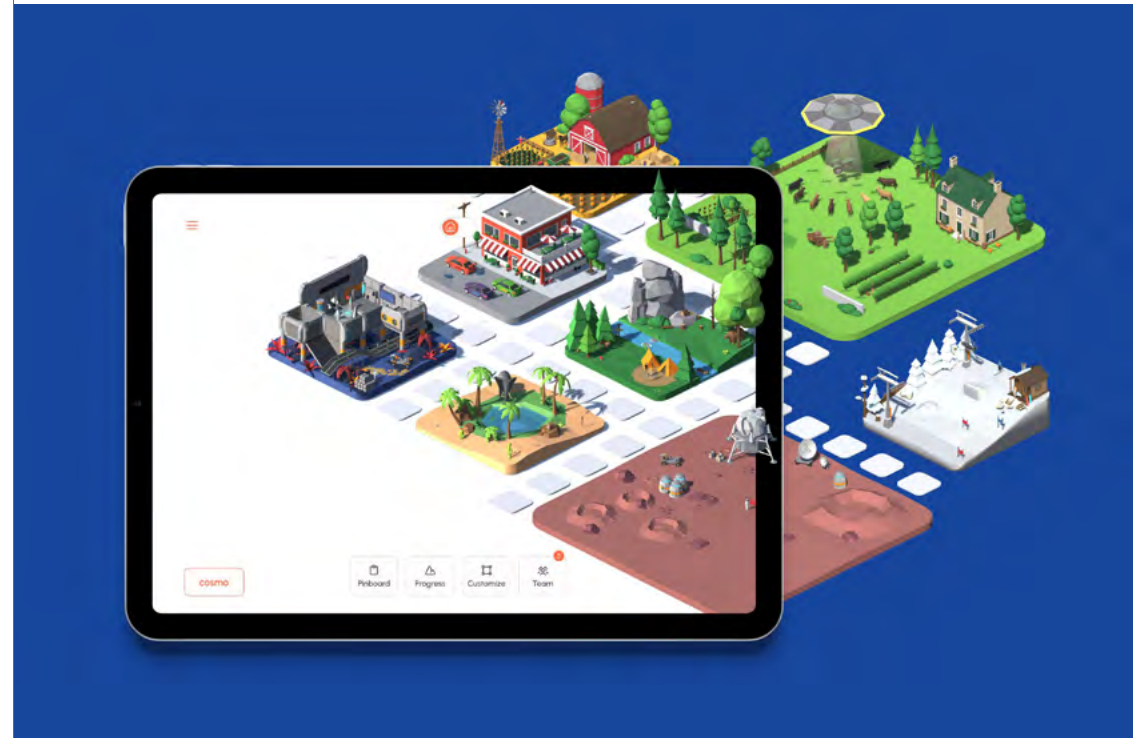

Website:
portfolio.hfg-gmuend.de

School:
Hochschule für Gestaltung
Schwäbisch Gmünd

Teacher:
Carmen Hartmann-Menzel, Georg Kneer

“Cosmo is an innovative platform offering a fresh approach to personalized learning paths using AI support. It combines meaningful gamification with conversational learning missions and a modern UI to create engaging experiences and address the decline in language learning. This strong creative concept helps children expand their vocabulary and supports teachers with progress insights. The jury highlights prompting as an area for further consideration, as it can weaken the interaction flow, especially if children lack language skills.”
— Monika Khanna & Alex Mulder

UX Design Award | New Talent

discover the colours of language

Float represents a water mobility sharing system designed to seamlessly incorporate local waterways into users' daily mobility routines. Comprising the water vehicle, hubs, the app, and the user interface, *Float* promotes accessibility through a straightforward and inclusive design, making waterways accessible to individuals irrespective of their prior experience. Controlled by the user, *Float* also features autonomous driving capabilities. Encouraging a transition from ownership to usage, *Float* revitalizes water as a natural urban transportation medium.

Design:
Dominic Hahn, Franziska Dehm

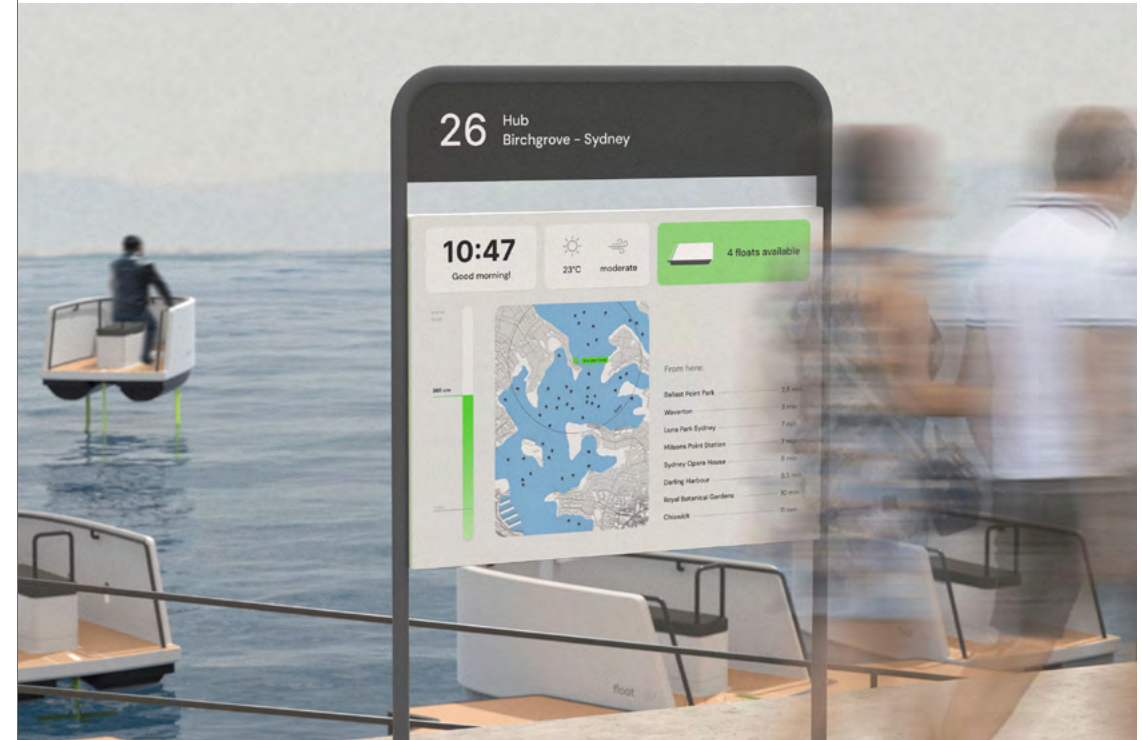

Website:
ausstellung.hfg-gmuend.de

School:
Hochschule für Gestaltung
Schwäbisch Gmünd

Teacher:
Matthias Held, Gabriele Reichert

"Float Mobility is a novel approach to integrated mobility via urban waterways, which is particularly useful for places where the land route is a major detour. The concept is very well researched, and the clear UX provides good guidance on rules on the water, making the concept usable for people without prior knowledge. The overall design concept has a modern and consistent look and feel, including maps, physical floats and different types of nodes. The underlying sharing concept can be beneficial to society, and the project aims to provide a fun experience while taking into account the challenge of providing sustainable public transportation."

— Ingolf Heinsch & Max Eicher

Menopause typically occurs in women between the ages of 45 and 55, and the associated hormonal changes lead to various symptoms. Unfortunately, many women may not be well-informed about how to manage menopause and may inadvertently neglect self-care. *Flowe* aims to promote women's well-being during this phase by encouraging them to remain active and emotionally connected. The platform suggests engaging with friends and family while offering rewards in the form of menopause-friendly flower teas.

Design:
Hyejeong Son, Seohyun Kang,
Ujeong Ko, Youngsun Roh

School:
Sookmyung Women's University

Teacher:
Yeunji Kim

"Flowe: Enjoy a healthy menopausal life addresses the specific needs of menopausal women by combining emotional and practical support through community, information and communication features. This femtech app focuses on topics such as body awareness, self-care and self-determination, enabling older women to engage with their bodies and discuss their condition more openly. The jury was impressed by the user-centered design and research, and a purposeful integration of AI-powered support features."

— Kathrin Eichhorn & Tae-Young Kang

UX Design Award | New Talent

Flowe
Enjoy a healthy menopausal life

Edaid is a digital application that assists teachers in trauma healing, academic disparity and inclusion at immigration-receiving schools. The main goal is to give teachers a plan to effectively measure how to approach, what to teach, and how to teach immigrant and refugee students in their classrooms. This helps address the disruption in education caused by current wars and political instability worldwide.

Design:
Jaime Delclaux Rodriguez-Rey

School:
Loughborough University

Website:
jdelclaux.myportfolio.com

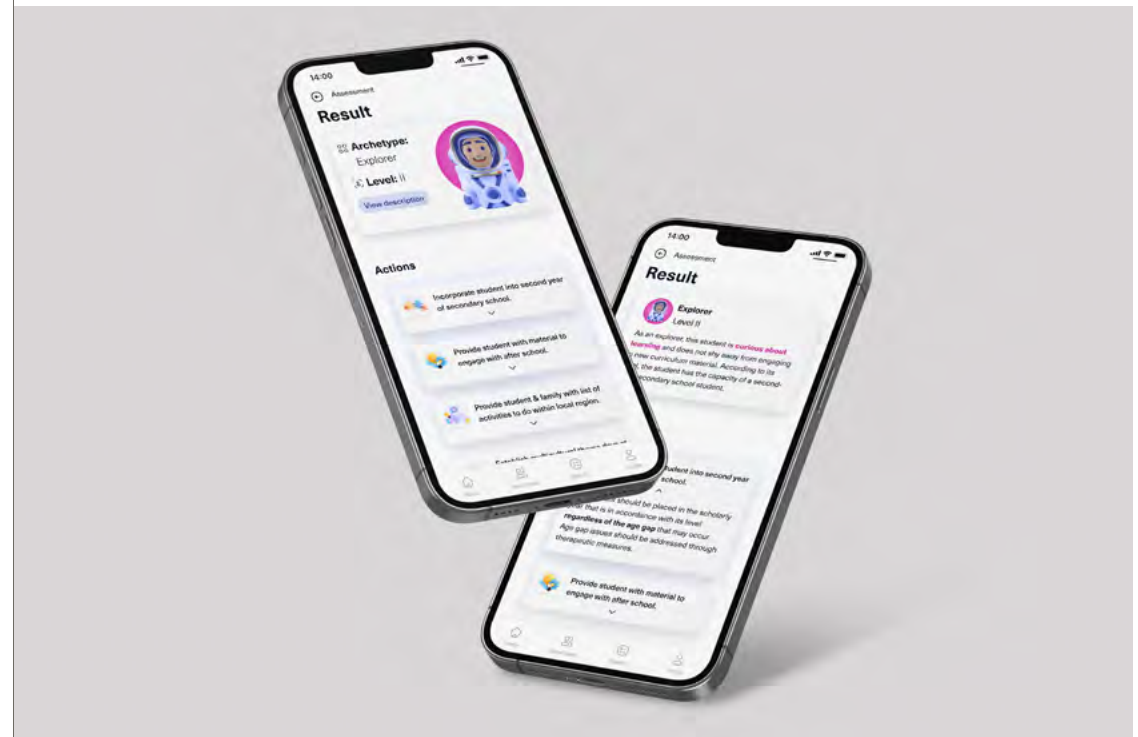

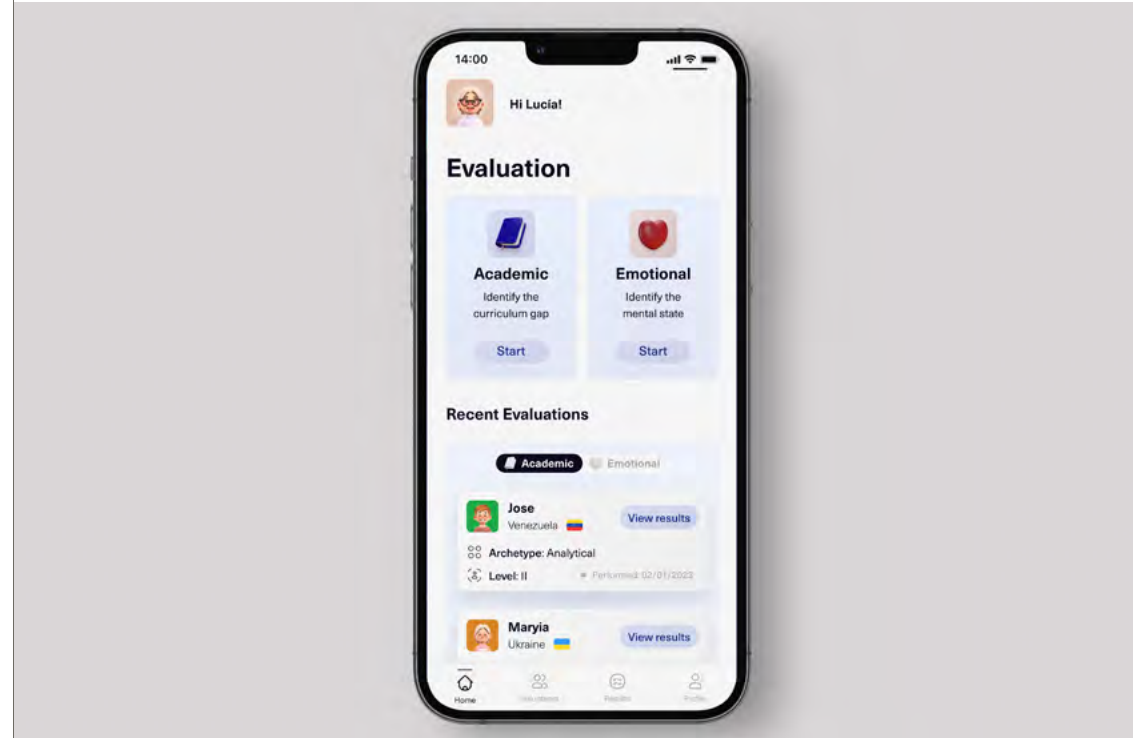

Teacher:
Andrew May, Val Mitchell, Shichao Zhao

“The project *Helping Teachers Integrate Refugee Students* has a very relevant goal: to improve the lives of refugee students by promoting education and individual support. The app achieves this aim by training teachers and supporting them in assessing the competence level and trauma background of migrant students. The result of thorough user-centered research, including qualitative generative interviews, the app offers simple and efficient user flows paired with a well-crafted UI design.” — Grace Fan & Jessie Kitchens

UX Design Award | New Talent

Helping Teachers Integrate Refugee Students

Kudo is an app tailored for Gen Z, offering a unique way to tackle climate change through daily, manageable actions alongside a virtual pet companion. It's designed to reduce climate anxiety by turning overwhelming challenges into engaging, bite-sized missions. Users can personalize their experience and gradually build sustainable habits. Ideal for young adults and teens, *Kudo* reimagines climate action as a fun, empowering journey, fostering positive relationships with sustainability.

Design:
Fan Fang, Brenda Son,
Yuri Kim, Yixin Chen

School:
School of Visual Arts

Teacher:
Criswell Lappin, Roger Mader

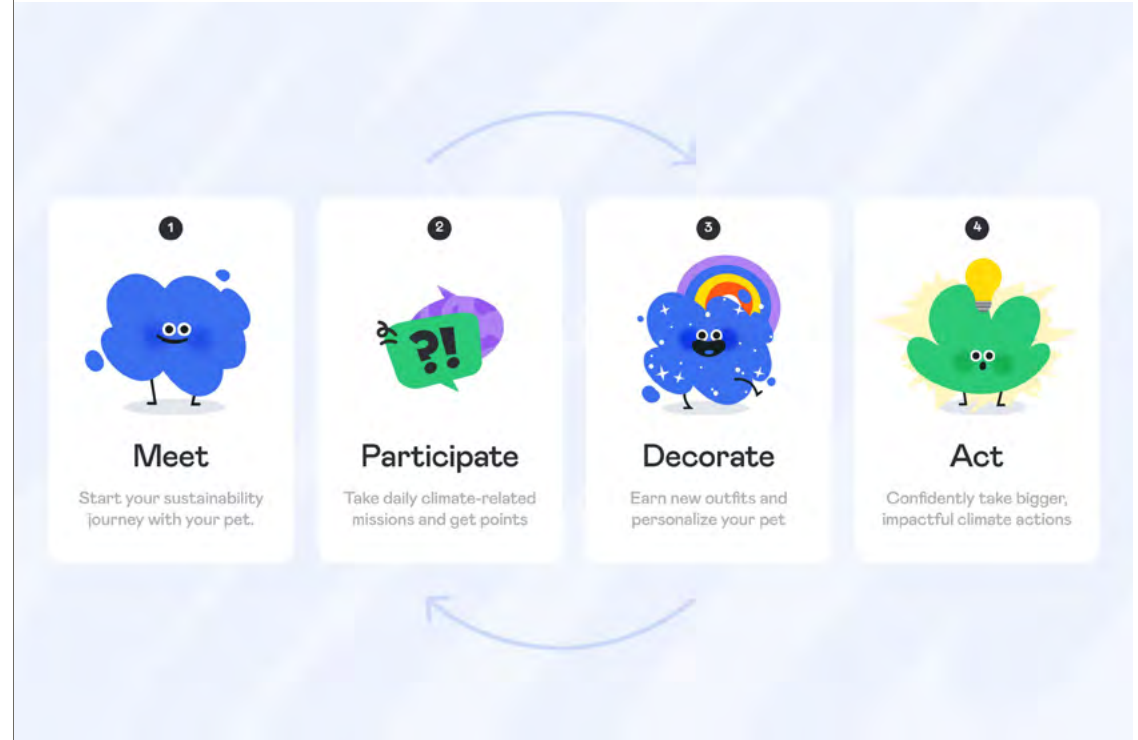

"Kudo – The cutest way to fight climate change is a highly appealing app with an engaging interface, virtual pet companion, and bite-sized missions. The jury found the goal of inspiring optimism by showing users that their actions can have a significant impact on climate change admirable and well executed. The approach – an incremental build-up toward a sustainable lifestyle – encourages users to take small, manageable and regular actions. The visual design is cute and friendly, and the sticker animation style, aimed at Generation Z, is right on brand." — Grace Fan & Jessie Kitchens

UX Design Award | New Talent

Kudo

The cutest way to fight climate change

Cystic Fibrosis (CF) is a genetic disease that causes thick mucus in patients' lungs, leading to irreversible damage. Daily Airway Clearance Therapy (ACT) is essential for clearing this mucus. However, adolescents often have low adherence rates to ACT. *Moi* is designed to improve adherence by guiding patients through a progressive journey. The system helps patients accept daily ACT on a psychological level, promoting motivation, independence, and efficiency to prevent early lung deterioration.

Design:
Yuchen Lan

School:
Umeå Institute of Design

Website:
yuchenlan.com

Teacher:
Thomas Degn, Aaron Wansch,
Johan Gustafsson

"*Moi* tackles the challenges of managing cystic fibrosis in young people with an innovative combination of hardware and app components. Its exceptional attention to detail, impressive user research, and collaboration with relevant organizations support its design. The concept effectively motivates long-term use and promotes user independence, making it a commendable and beautifully executed solution."
— Mine Danişman Taşar & Bernhard Staiber

UX Design Award | New Talent

Moi
A progressive ACT training kit

Pathfinder is an AR navigation service for people with mobility challenges. It provides wheelchair users with a personalized route when using the subway, and uses AR to present helpful information along the way. The device can be operated through voice recognition and hand interaction, taking into account the user's physical characteristics. The service can help improve the lives of people with mobility challenges, ensure their right to mobility, and contribute to building an inclusive society.

Design:
Ujeong Ko, Youngsun Roh,
Hyejeong Son, Chaewon Lee

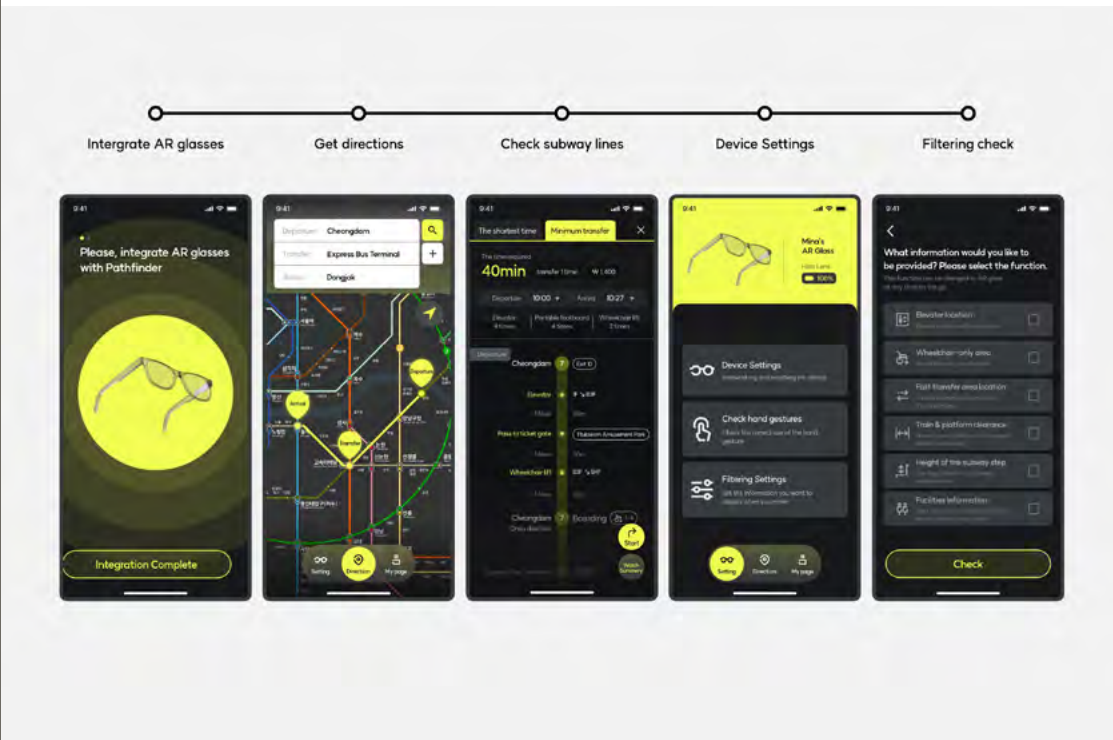

School:
Sookmyung Women's University

Teacher:
Yumi Na

“Pathfinder exemplifies design thinking to leverage emerging technologies for aiding those with mobility issues. It benefits not only wheelchair users but also the elderly, parents with strollers, and those carrying heavy objects. Initially focused on Seoul’s subway stations, the concept has broader potential for public transport systems globally. The project’s strength lies in its empathetic, user-centered design approach throughout its development and final outcome. It effectively incorporates novel technology, demonstrating how augmented reality and different interface methods can enhance accessibility.”

— Michelle Castañeda & Sofia Ryan

Routio is a developmental tool designed for children with ADHD, featuring a magnetic board that connects to apps tailored for parents and teachers. It includes Tetris-shaped blocks for daily tasks, model houses and trees for steps, and a ball-shaped controller for recording and replaying task sequences. The app integrates with the physical components to track real-time progress and manage classroom seating to enhance focus. *Routio* helps in forming habits and managing symptoms effectively.

Design:
Kejia (Carly) Chen,
Yinyu (Ophelia) Chen, Tingyu Tian

Website:
routio.org

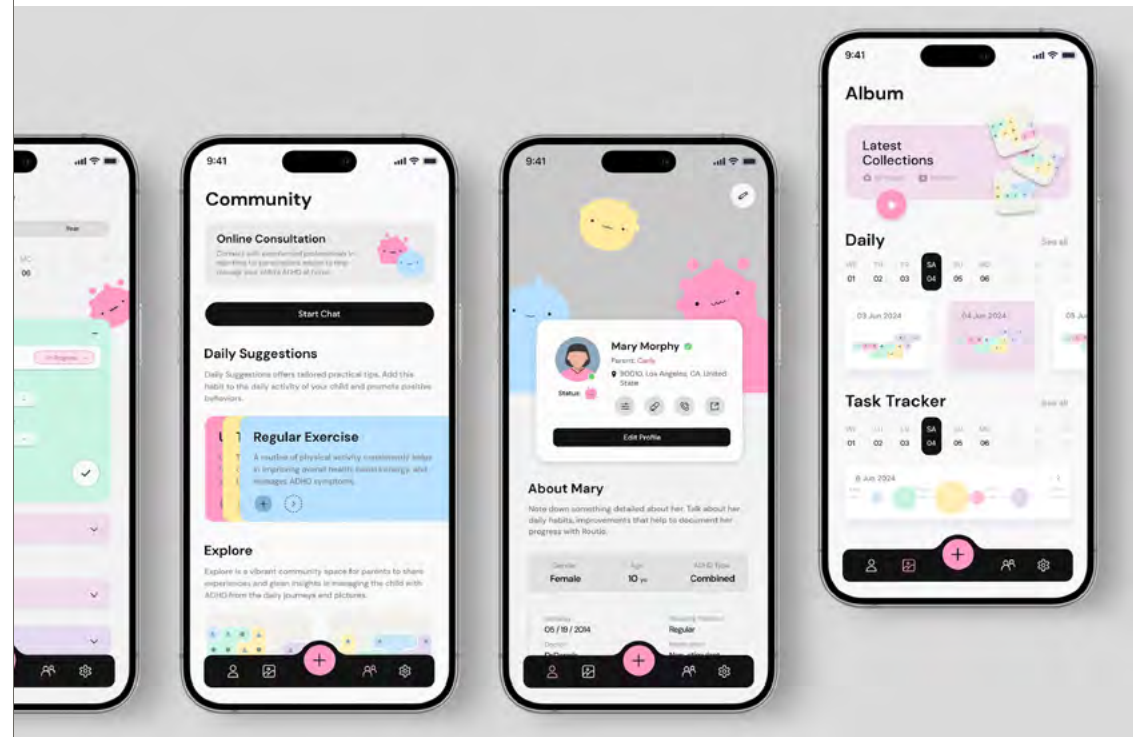

School:
ArtCenter College of Design

Teacher:
Jennifer Rodenhouse

“Routio combines digital and physical interactions to integrate the perspectives of children, parents, and teachers, creating a supportive community. Through playful visualization, it helps children experience success and can also benefit other groups like those with Asperger’s syndrome. Overall, Routio is an outstanding concept that promotes children’s development through a comprehensive and inclusive approach.”

— Dominique Burkard & Anna Raveling

UX Design Award | New Talent

Routio
Enhancing Organization for Kids with ADHD

Spotted is a learning support system designed to equip adults with the necessary tools for identifying and addressing potential learning difficulties. The comprehensive nature of this system allows for seamless navigation through interactive quizzes and targeted educational content, ultimately guiding users towards professional assessment. Additionally, *Spotted* actively promotes community inclusion by fostering an environment that celebrates and embraces neurodiversity.

Design:
Elizabeth Chambers

School:
Institute of Art, Design and Technology,
Dún Laoghaire

Teacher:
Denise McEvoy

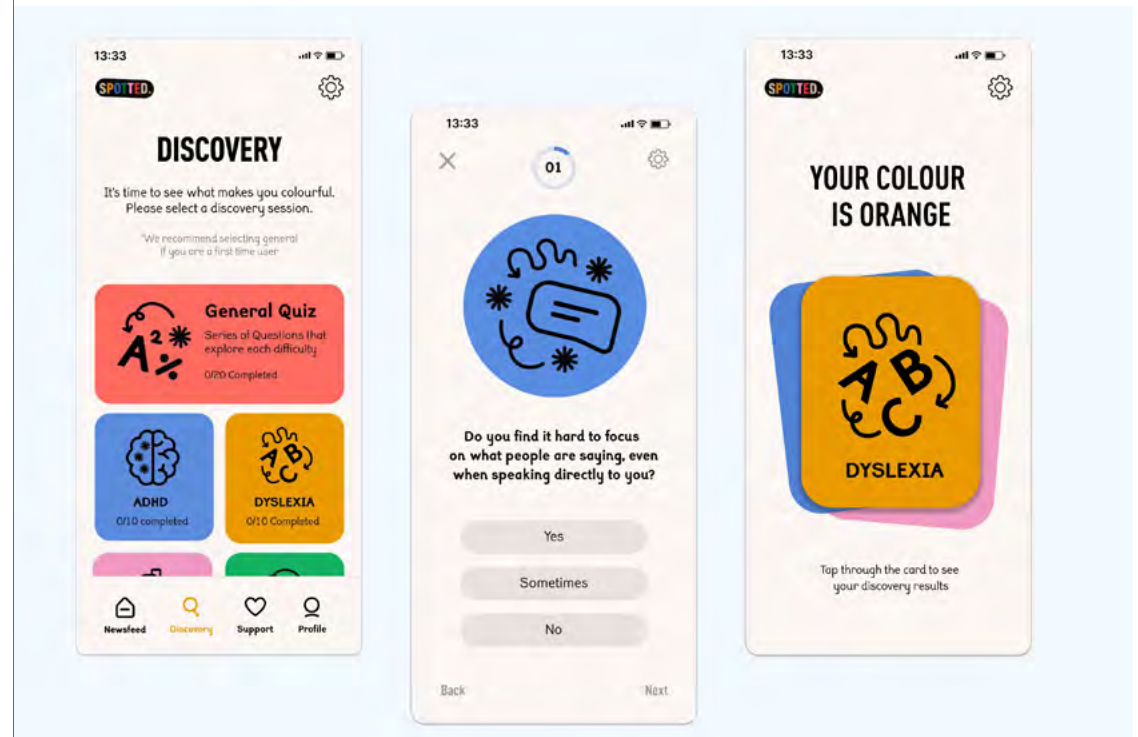

“Spotted – Turning difficulties into possibilities actively promotes community inclusion by fostering an environment that celebrates and embraces neurodiversity. The project impressed the jury through its solid research process, clear presentation and delightful UX. Spotted has identified a relevant problem... It advocates for neurodiversity acceptance by challenging stereotypes and fostering empowerment as well as empathy.”

— Gennett Aku Agbenu & Matthias Schmiedbauer

UX Design Award | New Talent

Spotted
Turning difficulties into possibilities

VW(View) is an algorithm hub for active content exploring. It allows an exploration of discerning useful information among countless content that pops up on the screen daily, and digesting it.

Design:
Hyeonjun Kim, Hyeonki Kim, Yoojin Lee,
Yehyeon Yoon, Suryun Hyeon

Website:
supersocial23.com

School:
Samsung Design Membership

Teacher:
Chiheon Kim, Jaeyoung Yoon

“VW(View) is a provocative concept that helps us rethink our role in selecting online content. It puts users back in control of what they see on social media by making algorithms transparent and manageable. In this way, it significantly influences people’s views, choices and relationships. The concept is bold and innovative, with remarkable design execution that balances beautiful aesthetics, functionality and user empowerment.”
— Michelle Castañeda & Sofia Ryan

Elsewhere with Apple is a native mobile application unveiled in the most recent iOS17 release, emphasizing liminal design principles. The application tackles the issue of users being contextually unavailable by offering immersive and engaging experiences that enable them to transcend the limitations of their physical surroundings.

Design:
Alina Danilyuk

School:
OCAD University

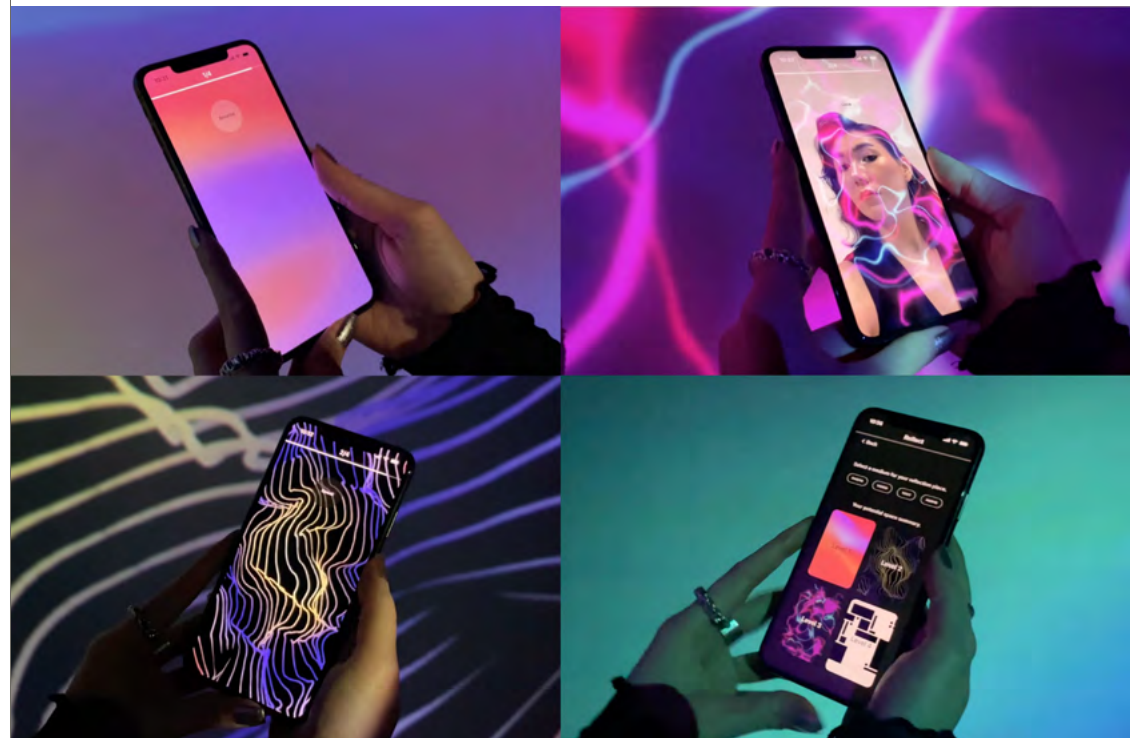

Teacher:
Angela Bains, Anthony Kerr,
Herman Pi'kea Clark, Jason Lujan,
Simone Jones, Sugandha Gaur

Great experiences are made for people. That's why we give everyone a voice! In each award season, we invite UX professionals and users worldwide to vote for their favorite projects on the Awards' website. All nominated entries are eligible. The winner of the Public Choice is proclaimed at the winner announcement, together with the titles decided upon by the jury. The high annual polling rate means that the best-voted entry is indeed the winner of the hearts of the global UX community. You will find the Public Choice winner for the Autumn season on page 56. Congratulations to the Public Choice Award winners!

“I can see many parallels between UX design and cooking – in terms of the evolution of the craft, its function, and even the effect or quality that comes out of it. In UX there is both fast food and haute cuisine. The UX Design Awards are there to help us see the difference, providing a great stage to recognize excellence in UX and help promote the criteria to a wider audience.”

— Bernhard Staiber, Unit Lead Digital Experiences, Intuity

Among more than 950 participants from 54 nations, 22 jury members nominated 287 projects to compete in two Award seasons. The nominees include 152 professional entries – 117 Products and 35 Concepts – and 135 projects by New Talents from around the world. The judges bestowed 26 awards and two Gold Awards across all three competition categories. In addition, more than 40.000 users worldwide voted for two Public Choice Award winners, one for each season. The International Design Center Berlin and the Award Jury congratulate all honorees of the UX Design Awards 2024 – we are proud to feature your work!
